(54) Title: A_{2B} ADENOSINE RECEPTOR ANTAGONISTS

(57) Abstract: Disclosed are novel compounds that are A_{2B} adenosine receptor antagonists; useful for treating various disease states, including asthma and diarrhea.

A_{2B} ADENOSINE RECEPTOR ANTAGONISTS

Priority is claimed to U.S. Provisional Patent Application Serial No. 60/348,222, filed November 9, 2001, and U.S. Provisional Patent Application Serial No. 60/401,408, filed August 5, 2002, the complete disclosures of which are hereby incorporated by reference.

5

Field of the Invention

The present invention relates to A_{2B} adenosine receptor antagonists, and to their use in treating mammals for various disease states, such as gastrointestinal disorders, immunological disorders, neurological disorders, and cardiovascular diseases due to both cellular
10 hyperproliferation and apoptosis, and the like. The invention also relates to methods for the preparation of such compounds, and to pharmaceutical compositions containing them.

Background

Adenosine is a naturally occurring nucleoside, which exerts its biological effects by
15 interacting with a family of adenosine receptors known as A₁, A_{2A}, A_{2B}, and A₃, all of which modulate important physiological processes. For example, A_{2A} adenosine receptors modulate coronary vasodilation, A_{2B} receptors have been implicated in mast cell activation, asthma, vasodilation, regulation of cell growth, intestinal function, and modulation of neurosecretion (See Adenosine A_{2B} Receptors as Therapeutic Targets, Drug Dev Res 45:198; Feoktistov et al.,
20 Trends Pharmacol Sci 19:148-153), and A₃ adenosine receptors modulate cell proliferation processes.

Adenosine A_{2B} receptors are ubiquitous, and regulate multiple biological activities. For example, adenosine binds to A_{2B} receptors on endothelial cells, thereby stimulating angiogenesis. Adenosine also regulates the growth of smooth muscle cell populations in blood vessels.
25 Adenosine stimulates A_{2B} receptors on mast cells, thus modulating Type I hypersensitivity reactions. Adenosine also stimulates gastrosecretory activity by ligation with A_{2B} in the intestine.

While many of these biological effects of adenosine are necessary to maintain normal tissue homeostasis, under certain physiological changes it is desirable to modulate its effects.
30 For example, the binding of A_{2B} receptors stimulates angiogenesis by promoting the growth of endothelial cells. Such activity is necessary in healing wounds, but the hyperproliferation of endothelial cells promotes diabetic retinopathy. Also, an undesirable increase in blood vessels occurs in neoplasia. Accordingly, inhibition of the binding of adenosine to A_{2B} receptors in the endothelium will alleviate or prevent hypervasculation, thus preventing retinopathy and
35 inhibiting tumor formation.

A_{2B} receptors are found in the colon in the basolateral domains of intestinal epithelial cells, and when acted upon by the appropriate ligand act to increase chloride secretion, thus causing diarrhea, which is a common and potentially fatal complication of infectious diseases such as cholera and typhus. A_{2B} antagonists can therefore be used to block intestinal chloride secretion, and are thus useful in the treatment of inflammatory gastrointestinal tract disorders, including diarrhea.

Insensitivity to insulin exacerbates diabetes and obesity. Insulin sensitivity is decreased by the interaction of adenosine with A_{2B} receptors. Thus, blocking the adenosine A_{2B} receptors of individuals with diabetes or obesity would benefit patients with these disorders.

Another adverse biological effect of adenosine acting at the A_{2B} receptor is the overstimulation of cerebral IL-6, a cytokine associated with dementias and Alzheimer's disease. Inhibiting the binding of adenosine to A_{2B} receptors would therefore mitigate those neurological disorders that are produced by IL-6.

Type I hypersensitivity disorders, such as asthma, hay fever, and atopic eczema, are stimulated by binding to A_{2B} -receptors of mast cells. Therefore, blocking these adenosine receptors would provide a therapeutic benefit against such disorders.

There are several compounds presently used in the treatment of asthma. For example, theophylline is an effective antiasthmatic agent, even though it is a poor adenosine receptor antagonist. However, considerable plasma levels are needed for it to be effective. Additionally, theophylline has substantial side effects, most of which are due to its CNS action, which provide no beneficial effects in asthma, and to the fact that it non-specifically blocks all adenosine receptor subtypes.

Additionally adenosine treatment, such as inhaled adenosine (or adenosine monophosphate), provokes bronchoconstriction in asthmatics, but not in the normal population. This process is known to involve mast cell activation, in that it releases mast cell mediators, including histamine, PGD₂, β -hexosaminidase and tryptase, and because it can be blocked by specific histamine H₁ blockers and cromolyn sodium. Accordingly, there is an intrinsic difference in the way adenosine interacts with mast cells from asthmatics, and thus A_{2B} antagonists are particularly useful in modulating mast cell function or in the activation of human lung cells.

Accordingly, it is desired to provide compounds that are potent A_{2B} antagonists, fully or partially selective for the A_{2B} receptor, useful in the treatment of various disease states related to modulation of the A_{2B} receptor, for example cancer, asthma and diarrhea.

SUMMARY OF THE INVENTION

It is an object of this invention to provide A_{2B} receptor antagonists. Accordingly, in a first aspect, the invention relates to compounds of Formula I and Formula II:

Formula I

Formula II

wherein:

- R¹ and R² are independently chosen from hydrogen, optionally substituted alkyl, or a group -D-E, in which D is a covalent bond or alkylene, and E is optionally substituted alkoxy, optionally substituted cycloalkyl, optionally substituted aryl, optionally substituted heteroaryl, optionally substituted heterocyclyl, optionally substituted alkenyl or optionally substituted alkynyl, with the proviso that when D is a covalent bond E cannot be alkoxy;
- R³ is hydrogen, optionally substituted alkyl or optionally substituted cycloalkyl;
- X is optionally substituted arylene or optionally substituted heteroarylene;
- Y is a covalent bond or alkylene in which one carbon atom can be optionally replaced by -O-, -S-, or -NH-, and is optionally substituted by hydroxy, alkoxy, optionally substituted amino, or -COR, in which R is hydroxy, alkoxy or amino;
- with the proviso that when the optional substitution is hydroxy or amino it cannot be adjacent to a heteroatom; and
- Z is optionally substituted monocyclic aryl or optionally substituted monocyclic heteroaryl; or Z is hydrogen when X is optionally substituted heteroarylene and Y is a covalent bond; with the proviso that when X is optionally substituted arylene, Z is optionally substituted monocyclic heteroaryl.

A second aspect of this invention relates to pharmaceutical formulations, comprising a therapeutically effective amount of a compound of Formula I or Formula II, or a mixture thereof, and at least one pharmaceutically acceptable excipient.

A third aspect of this invention relates to a method of using the compounds of Formula I and Formula II in the treatment of a disease or condition in a mammal that can be usefully treated with an A_{2B} receptor antagonist, comprising administering to a mammal in need thereof a therapeutically effective dose of a compound of Formula I or Formula II, or a mixture thereof.

Such diseases include, but are not limited to, at least one of asthma, inflammatory gastrointestinal tract disorders, including diarrhea, cardiovascular diseases such as atherosclerosis, neurological disorders such as senile dementia, Alzheimer's disease, and Parkinson's disease, and diseases related to angiogenesis, for example diabetic retinopathy and
5 cancer.

A fourth aspect of this invention relates to methods for preparing the compounds of Formula I and Formula II.

One preferred group of compounds of Formula I and II are those in which R^1 and R^2 are independently hydrogen, optionally substituted lower alkyl, or a group -D-E, in which D is a
10 covalent bond or alkylene, and E is optionally substituted phenyl, optionally substituted cycloalkyl, optionally substituted alkenyl, or optionally substituted alkynyl, particularly those in which R^3 is hydrogen.

Within this group, a first preferred class of compounds include those in which R^1 and R^2 are independently lower alkyl optionally substituted by cycloalkyl, preferably n-propyl, and X is
15 optionally substituted phenylene. Within this class, a preferred subclass of compounds are those in which Y is alkylene, including alkylene in which a carbon atom is replaced by oxygen, preferably -O-CH₂-, more especially where the oxygen is the point of attachment to phenylene. Within this subclass, it is preferred that Z is optionally substituted oxadiazole, particularly optionally substituted [1,2,4]-oxadiazol-3-yl, especially [1,2,4]-oxadiazol-3-yl substituted by
20 optionally substituted phenyl.

A second preferred class of compounds include those in which X is optionally substituted 1,4-pyrazolene. Within this class, a preferred subclass of compounds are those in which Y is alkylene, especially lower alkylene, and Z is hydrogen, optionally substituted phenyl or optionally substituted oxadiazole. Within this subclass, one preferred embodiment includes
25 compounds in which R^1 is lower alkyl optionally substituted by cycloalkyl, and R^2 is hydrogen. A more preferred embodiment includes those compounds in which Y is -(CH₂)- or -CH(CH₃)- and Z is optionally substituted phenyl. Another preferred embodiment includes those compounds in which Y is -(CH₂)- or -CH(CH₃)- and Z is optionally substituted oxadiazole, particularly 3,5-[1,2,4]-oxadiazole. Within this subclass, also preferred are those compounds in
30 which R^1 and R^2 are independently lower alkyl optionally substituted by cycloalkyl, especially n-propyl. More preferred are those compounds in which Y is a covalent bond, -(CH₂)- or -CH(CH₃)- and Z is hydrogen or optionally substituted phenyl, particularly where Y is a covalent bond and Z is hydrogen.

At present, the preferred compounds are:

35 1-propyl-8-(1-{{3-(trifluoromethyl)phenyl}-methyl}pyrazol-4-yl)-1,3,7-trihydropurine-2,6-dione;

- 1-propyl-8-[1-benzylpyrazol-4-yl]-1,3,7-trihydropurine-2,6-dione;
 1-butyl-8-(1-[[3-fluorophenyl]methyl]pyrazol-4-yl)-1,3,7-trihydropurine-2,6-dione;
 1-propyl-8-[1-(phenylethyl)pyrazol-4-yl]-1,3,7-trihydropurine-2,6-dione;
 8-(1-[[5-(4-chlorophenyl)(1,2,4-oxadiazol-3-yl)]methyl]pyrazol-4-yl)-1-propyl-1,3,7-
 5 trihydropurine-2,6-dione;
 8-(1-[[5-(4-chlorophenyl)(1,2,4-oxadiazol-3-yl)]methyl]pyrazol-4-yl)-1-butyl-1,3,7-
 trihydropurine-2,6-dione;
 1,3-dipropyl-8-pyrazol-4-yl-1,3,7-trihydropurine-2,6-dione;
 1-methyl-3-sec-butyl-8-pyrazol-4-yl-1,3,7-trihydropurine-2,6-dione;
 10 1-cyclopropylmethyl-3-methyl-8-{1-[(3-trifluoromethylphenyl)methyl]pyrazol-4-yl}-1,3,7-
 trihydropurine-2,6-dione;
 1,3-dimethyl-8-{1-[(3-fluorophenyl)methyl]pyrazol-4-yl}-1,3,7-trihydropurine-2,6-dione;
 3-methyl-1-propyl-8-{1-[(3-trifluoromethylphenyl)methyl]pyrazol-4-yl}-1,3,7-trihydropurine-
 2,6-dione;
 15 3-ethyl-1-propyl-8-{1-[(3-trifluoromethylphenyl)methyl]pyrazol-4-yl}-1,3,7-trihydropurine-2,6-
 dione;
 1,3-dipropyl-8-(1-[[3-(trifluoromethyl)phenyl]methyl]pyrazol-4-yl)-1,3,7-trihydropurine-2,6-
 dione;
 1,3-dipropyl-8-{1-[(3-fluorophenyl)methyl]pyrazol-4-yl}-1,3,7-trihydropurine-2,6-dione;
 20 1-ethyl-3-methyl-8-{1-[(3-fluorophenyl)methyl]pyrazol-4-yl}-1,3,7-trihydropurine-2,6-dione;
 1,3-dipropyl-8-{1-[(2-methoxyphenyl)methyl]pyrazol-4-yl}-1,3,7-trihydropurine-2,6-dione;
 1,3-dipropyl-8-(1-[[3-(trifluoromethyl)-phenyl]ethyl]pyrazol-4-yl)-1,3,7-trihydropurine-2,6-
 dione;
 1,3-dipropyl-8-{1-[(4-carboxyphenyl)methyl]pyrazol-4-yl}-1,3,7-trihydropurine-2,6-dione;
 25 2-[4-(2,6-dioxo-1,3-dipropyl(1,3,7-trihydropurin-8-yl))pyrazolyl]-2-phenylacetic acid;
 8-{4-[5-(2-methoxyphenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-
 trihydropurine-2,6-dione;
 8-{4-[5-(3-methoxyphenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-
 trihydropurine-2,6-dione; and
 30 8-{4-[5-(4-fluorophenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-
 trihydropurine-2,6-dione.

Definitions and General Parameters

As used in the present specification, the following words and phrases are generally
 35 intended to have the meanings as set forth below, except to the extent that the context in which

they are used indicates otherwise.

The term "alkyl" refers to a monoradical branched or unbranched saturated hydrocarbon chain having 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19 or 20 carbon atoms.

This term is exemplified by groups such as methyl, ethyl, n-propyl, iso-propyl, n-butyl, iso-butyl, t-butyl, n-hexyl, n-decyl, tetradecyl, and the like.

The term "substituted alkyl" refers to:

- 1) an alkyl group as defined above, having 1, 2, 3, 4 or 5 substituents, preferably 1 to 3 substituents, selected from the group consisting of alkenyl, alkynyl, alkoxy, cycloalkyl, cycloalkenyl, acyl, acylamino, acyloxy, amino, aminocarbonyl, alkoxycarbonylamino, azido, cyano, halogen, hydroxy, keto, thiocarbonyl, carboxy, carboxyalkyl, arylthio, heteroarylthio, heterocyclylthio, thiol, alkylthio, aryl, aryloxy, heteroaryl, aminosulfonyl, aminocarbonylamino, heteroaryloxy, heterocyclyl, heterocyclooxy, hydroxyamino, alkoxyamino, nitro, -SO-alkyl, -SO-aryl, -SO-heteroaryl, -SO₂-alkyl, SO₂-aryl and -SO₂-heteroaryl. Unless otherwise constrained by the definition, all substituents may optionally be further substituted by 1, 2, or 3 substituents chosen from alkyl, carboxy, carboxyalkyl, aminocarbonyl, hydroxy, alkoxy, halogen, CF₃, amino, substituted amino, cyano, and -S(O)_nR, where R is alkyl, aryl, or heteroaryl and n is 0, 1 or 2; or
- 2) an alkyl group as defined above that is interrupted by 1-10 atoms independently chosen from oxygen, sulfur and NR_a-, where R_a is chosen from hydrogen, alkyl, cycloalkyl, alkenyl, cycloalkenyl, alkynyl, aryl, heteroaryl and heterocyclyl. All substituents may be optionally further substituted by alkyl, alkoxy, halogen, CF₃, amino, substituted amino, cyano, or -S(O)_nR, in which R is alkyl, aryl, or heteroaryl and n is 0, 1 or 2; or
- 3) an alkyl group as defined above that has both 1, 2, 3, 4 or 5 substituents as defined above and is also interrupted by 1-10 atoms as defined above.

The term "lower alkyl" refers to a monoradical branched or unbranched saturated hydrocarbon chain having 1, 2, 3, 4, 5, or 6 carbon atoms. This term is exemplified by groups such as methyl, ethyl, n-propyl, iso-propyl, n-butyl, iso-butyl, t-butyl, n-hexyl, and the like.

The term "substituted lower alkyl" refers to lower alkyl as defined above having 1 to 5 substituents, preferably 1, 2, or 3 substituents, as defined for substituted alkyl, or a lower alkyl group as defined above that is interrupted by 1, 2, 3, 4, or 5 atoms as defined for substituted alkyl, or a lower alkyl group as defined above that has both 1, 2, 3, 4 or 5 substituents as defined above and is also interrupted by 1, 2, 3, 4, or 5 atoms as defined above.

The term "alkylene" refers to a diradical of a branched or unbranched saturated hydrocarbon chain, having 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19 or 20 carbon atoms, preferably 1-10 carbon atoms, more preferably 1, 2, 3, 4, 5 or 6 carbon atoms.

This term is exemplified by groups such as methylene ($-\text{CH}_2-$), ethylene ($-\text{CH}_2\text{CH}_2-$), the propylene isomers (e.g., $-\text{CH}_2\text{CH}_2\text{CH}_2-$ and $-\text{CH}(\text{CH}_3)\text{CH}_2-$) and the like.

The term "lower alkylene" refers to a diradical of a branched or unbranched saturated hydrocarbon chain, preferably having from 1, 2, 3, 4, 5, or 6 carbon atoms.

5 The term "lower alkylene" refers to a diradical of a branched or unbranched saturated hydrocarbon chain, preferably having from 1, 2, 3, 4, 5, or 6 carbon atoms.

The term "substituted alkylene" refers to:

- (1) an alkylene group as defined above having 1, 2, 3, 4, or 5 substituents selected from the group consisting of alkyl, alkenyl, alkynyl, alkoxy, cycloalkyl, cycloalkenyl, acyl, acylamino, acyloxy, amino, aminocarbonyl, alkoxy-carbonylamino, azido, cyano, halogen, hydroxy, keto, thiocarbonyl, carboxy, carboxyalkyl, arylthio, heteroarylthio, heterocyclylthio, thiol, alkylthio, aryl, aryloxy, heteroaryl, aminosulfonyl, aminocarbonylamino, heteroaryloxy, heterocyclyl, heterocycloxy, hydroxyamino, alkoxyamino, nitro, $-\text{SO}-\text{alkyl}$, $-\text{SO}-\text{aryl}$, $-\text{SO}-\text{heteroaryl}$, $-\text{SO}_2-\text{alkyl}$, SO_2-aryl and $-\text{SO}_2-$ heteroaryl. Unless otherwise constrained by the definition, all substituents may optionally be further substituted by 1, 2, or 3 substituents chosen from alkyl, carboxy, carboxyalkyl, aminocarbonyl, hydroxy, alkoxy, halogen, CF_3 , amino, substituted amino, cyano, and $-\text{S}(\text{O})_n\text{R}$, where R is alkyl, aryl, or heteroaryl and n is 0, 1 or 2; or
- (2) an alkylene group as defined above that is interrupted by 1-20 atoms independently chosen from oxygen, sulfur and NR_a- , where R_a is chosen from hydrogen, optionally substituted alkyl, cycloalkyl, cycloalkenyl, aryl, heteroaryl and heterocyclyl, or groups selected from carbonyl, carboxyester, carboxyamide and sulfonyl; or
- (3) an alkylene group as defined above that has both 1, 2, 3, 4 or 5 substituents as defined above and is also interrupted by 1-20 atoms as defined above. Examples of substituted alkylens are chloromethylene ($-\text{CH}(\text{Cl})-$), aminoethylene ($-\text{CH}(\text{NH}_2)\text{CH}_2-$), methylaminoethylene ($-\text{CH}(\text{NHMe})\text{CH}_2-$), 2-carboxypropylene isomers ($-\text{CH}_2\text{CH}(\text{CO}_2\text{H})\text{CH}_2-$), ethoxyethyl ($-\text{CH}_2\text{CH}_2\text{O}-\text{CH}_2\text{CH}_2-$), ethylmethylaminoethyl ($-\text{CH}_2\text{CH}_2\text{N}(\text{CH}_3)\text{CH}_2\text{CH}_2-$), 1-ethoxy-2-(2-ethoxy-ethoxy)ethane ($-\text{CH}_2\text{CH}_2\text{O}-\text{CH}_2\text{CH}_2-\text{OCH}_2\text{CH}_2-\text{OCH}_2\text{CH}_2-$), and the like.

30 The term "aralkyl" refers to an aryl group covalently linked to an alkylene group, where aryl and alkylene are defined herein. "Optionally substituted aralkyl" refers to an optionally substituted aryl group covalently linked to an optionally substituted alkylene group. Such aralkyl groups are exemplified by benzyl, phenylethyl, 3-(4-methoxyphenyl)propyl, and the like.

The term "alkoxy" refers to the group $\text{R}-\text{O}-$, where R is optionally substituted alkyl or optionally substituted cycloalkyl, or R is a group $-\text{Y}-\text{Z}$, in which Y is optionally substituted

alkylene and Z is optionally substituted alkenyl, optionally substituted alkynyl; or optionally substituted cycloalkenyl, where alkyl, alkenyl, alkynyl, cycloalkyl and cycloalkenyl are as defined herein. Preferred alkoxy groups are optionally substituted alkyl-O- and include, by way of example, methoxy, ethoxy, n-propoxy, iso-propoxy, n-butoxy, tert-butoxy, sec-butoxy, n-pentoxo, n-hexoxy, 1,2-dimethylbutoxy, trifluoromethoxy, and the like.

The term "alkylthio" refers to the group R-S-, where R is as defined for alkoxy.

The term "alkenyl" refers to a monoradical of a branched or unbranched unsaturated hydrocarbon group preferably having from 2 to 20 carbon atoms, more preferably 2 to 10 carbon atoms and even more preferably 2 to 6 carbon atoms and having 1-6, preferably 1, double bond (vinyl). Preferred alkenyl groups include ethenyl or vinyl (-CH=CH₂), 1-propylene or allyl (-CH₂CH=CH₂), isopropylene (-C(CH₃)=CH₂), bicyclo[2.2.1]heptene, and the like. In the event that alkenyl is attached to nitrogen, the double bond cannot be alpha to the nitrogen.

The term "lower alkenyl" refers to alkenyl as defined above having from 2 to 6 carbon atoms.

The term "substituted alkenyl" refers to an alkenyl group as defined above having 1, 2, 3, 4 or 5 substituents, and preferably 1, 2, or 3 substituents, selected from the group consisting of alkyl, alkenyl, alkynyl, alkoxy, cycloalkyl, cycloalkenyl, acyl, acylamino, acyloxy, amino, aminocarbonyl, alkoxycarbonylamino, azido, cyano, halogen, hydroxy, keto, thiocarbonyl, carboxy, carboxyalkyl, arylthio, heteroarylthio, heterocyclylthio, thiol, alkylthio, aryl, aryloxy, heteroaryl, aminosulfonyl, aminocarbonylamino, heteroaryloxy, heterocyclyl, heterocycloxy, hydroxyamino, alkoxyamino, nitro, -SO-alkyl, -SO-aryl, -SO-heteroaryl, -SO₂-alkyl, SO₂-aryl and -SO₂-heteroaryl. Unless otherwise constrained by the definition, all substituents may optionally be further substituted by 1, 2, or 3 substituents chosen from alkyl, carboxy, carboxyalkyl, aminocarbonyl, hydroxy, alkoxy, halogen, CF₃, amino, substituted amino, cyano, and -S(O)_nR, where R is alkyl, aryl, or heteroaryl and n is 0, 1 or 2.

The term "alkynyl" refers to a monoradical of an unsaturated hydrocarbon, preferably having from 2 to 20 carbon atoms, more preferably 2 to 10 carbon atoms and even more preferably 2 to 6 carbon atoms and having at least 1 and preferably from 1-6 sites of acetylene (triple bond) unsaturation. Preferred alkynyl groups include ethynyl, propargyl (or prop-1-yn-3-yl, -CH₂C≡CH), and the like. In the event that alkynyl is attached to nitrogen, the triple bond cannot be alpha to the nitrogen.

The term "substituted alkynyl" refers to an alkynyl group as defined above having 1, 2, 3, 4 or 5 substituents, and preferably 1, 2, or 3 substituents, selected from the group consisting of alkyl, alkenyl, alkynyl, alkoxy, cycloalkyl, cycloalkenyl, acyl, acylamino, acyloxy, amino,

aminocarbonyl, alkoxycarbonylamino, azido, cyano, halogen, hydroxy, keto, thiocarbonyl, carboxy, carboxyalkyl, arylthio, heteroarylthio, heterocyclylthio, thiol, alkylthio, aryl, aryloxy, heteroaryl, aminosulfonyl, aminocarbonylamino, heteroaryloxy, heterocyclyl, heterocyclooxy, hydroxyamino, alkoxyamino, nitro, -SO-alkyl, -SO-aryl, -SO-heteroaryl, -SO₂-alkyl, SO₂-aryl
5 and -SO₂-heteroaryl. Unless otherwise constrained by the definition, all substituents may optionally be further substituted by 1, 2, or 3 substituents chosen from alkyl, carboxy, carboxyalkyl, aminocarbonyl, hydroxy, alkoxy, halogen, CF₃, amino, substituted amino, cyano, and -S(O)_nR, where R is alkyl, aryl, or heteroaryl and n is 0, 1 or 2.

The term "aminocarbonyl" refers to the group -C(O)NRR where each R is independently
10 hydrogen, alkyl, aryl, heteroaryl, heterocyclyl or where both R groups are joined to form a heterocyclic group (e.g., morpholino). Unless otherwise constrained by the definition, all substituents may optionally be further substituted by 1-3 substituents chosen from alkyl, carboxy, carboxyalkyl, aminocarbonyl, hydroxy, alkoxy, halogen, CF₃, amino, substituted amino, cyano, and -S(O)_nR, where R is alkyl, aryl, or heteroaryl and n is 0, 1 or 2.

15 The term "acylamino" refers to the group -NRC(O)R where each R is independently hydrogen, alkyl, aryl, heteroaryl, or heterocyclyl. Unless otherwise constrained by the definition, all substituents may optionally be further substituted by 1-3 substituents chosen from alkyl, carboxy, carboxyalkyl, aminocarbonyl, hydroxy, alkoxy, halogen, CF₃, amino, substituted amino, cyano, and -S(O)_nR, where R is alkyl, aryl, or heteroaryl and n is 0, 1 or 2.

20 The term "acyloxy" refers to the groups -O(O)C-alkyl, -O(O)C-cycloalkyl, -O(O)C-aryl, -O(O)C-heteroaryl, and -O(O)C-heterocyclyl. Unless otherwise constrained by the definition, all substituents may be optionally further substituted by alkyl, carboxy, carboxyalkyl, aminocarbonyl, hydroxy, alkoxy, halogen, CF₃, amino, substituted amino, cyano, or -S(O)_nR, where R is alkyl, aryl, or heteroaryl and n is 0, 1 or 2.

25 The term "aryl" refers to an aromatic carbocyclic group of 6 to 20 carbon atoms having a single ring (e.g., phenyl) or multiple rings (e.g., biphenyl), or multiple condensed (fused) rings (e.g., naphthyl or anthryl). Preferred aryls include phenyl, naphthyl and the like.

The term "arylene" refers to a diradical of an aryl group as defined above. This term is exemplified by groups such as 1,4-phenylene, 1,3-phenylene, 1,2-phenylene, 1,4'-biphenylene,
30 and the like.

Unless otherwise constrained by the definition for the aryl or arylene substituent, such aryl or arylene groups can optionally be substituted with from 1 to 5 substituents, preferably 1 to 3 substituents, selected from the group consisting of alkyl, alkenyl, alkynyl, alkoxy, cycloalkyl, cycloalkenyl, acyl, acylamino, acyloxy, amino, aminocarbonyl, alkoxycarbonylamino, azido,
35 cyano, halogen, hydroxy, keto, thiocarbonyl, carboxy, carboxyalkyl, arylthio, heteroarylthio,

heterocyclylthio, thiol, alkylthio, aryl, aryloxy, heteroaryl, aminosulfonyl, aminocarbonylamino, heteroaryloxy, heterocyclyl, heterocyclooxy, hydroxyamino, alkoxyamino, nitro, -SO-alkyl, -SO-aryl, -SO-heteroaryl, -SO₂-alkyl, SO₂-aryl and -SO₂-heteroaryl. Unless otherwise constrained by the definition, all substituents may optionally be further substituted by 1-3 substituents chosen
5 from alkyl, carboxy, carboxyalkyl, aminocarbonyl, hydroxy, alkoxy, halogen, CF₃, amino, substituted amino, cyano, and -S(O)_nR, where R is alkyl, aryl, or heteroaryl and n is 0, 1 or 2.

The term "aryloxy" refers to the group aryl-O- wherein the aryl group is as defined above, and includes optionally substituted aryl groups as also defined above. The term "arylthio" refers to the group R-S-, where R is as defined for aryl.

10 The term "amino" refers to the group -NH₂.

The term "substituted amino" refers to the group -NRR where each R is independently selected from the group consisting of hydrogen, alkyl, cycloalkyl, carboxyalkyl (for example, benzyloxycarbonyl), aryl, heteroaryl and heterocyclyl provided that both R groups are not hydrogen, or a group -Y-Z, in which Y is optionally substituted alkylene and Z is alkenyl,
15 cycloalkenyl, or alkynyl. Unless otherwise constrained by the definition, all substituents may optionally be further substituted by 1-3 substituents chosen from alkyl, carboxy, carboxyalkyl, aminocarbonyl, hydroxy, alkoxy, halogen, CF₃, amino, substituted amino, cyano, and -S(O)_nR, where R is alkyl, aryl, or heteroaryl and n is 0, 1 or 2.

The term "carboxyalkyl" refers to the groups -C(O)O-alkyl,
20 -C(O)O-cycloalkyl, where alkyl and cycloalkyl, are as defined herein, and may be optionally further substituted by alkyl, alkenyl, alkynyl, alkoxy, halogen, CF₃, amino, substituted amino, cyano, or -S(O)_nR, in which R is alkyl, aryl, or heteroaryl and n is 0, 1 or 2.

The term "cycloalkyl" refers to carbocyclic groups of from 3 to 20 carbon atoms having a single cyclic ring or multiple condensed rings. Such cycloalkyl groups include, by way of
25 example, single ring structures such as cyclopropyl, cyclobutyl, cyclopentyl, cyclooctyl, and the like, or multiple ring structures such as adamantanyl, bicyclo[2.2.1]heptane, 1,3,3-trimethylbicyclo[2.2.1]hept-2-yl, (2,3,3-trimethylbicyclo[2.2.1]hept-2-yl), or carbocyclic groups to which is fused an aryl group, for example indane, and the like.

The term "substituted cycloalkyl" refers to cycloalkyl groups having 1, 2, 3, 4 or 5
30 substituents, and preferably 1, 2, or 3 substituents, selected from the group consisting of alkyl, alkenyl, alkynyl, alkoxy, cycloalkyl, cycloalkenyl, acyl, acylamino, acyloxy, amino, aminocarbonyl, alkoxycarbonylamino, azido, cyano, halogen, hydroxy, keto, thiocarbonyl, carboxy, carboxyalkyl, arylthio, heteroarylthio, heterocyclylthio, thiol, alkylthio, aryl, aryloxy, heteroaryl, aminosulfonyl, aminocarbonylamino, heteroaryloxy, heterocyclyl, heterocyclooxy,
35 hydroxyamino, alkoxyamino, nitro, -SO-alkyl, -SO-aryl, -SO-heteroaryl, -SO₂-alkyl, SO₂-aryl

and -SO₂-heteroaryl. Unless otherwise constrained by the definition, all substituents may optionally be further substituted by 1, 2, or 3 substituents chosen from alkyl, carboxy, carboxyalkyl, aminocarbonyl, hydroxy, alkoxy, halogen, CF₃, amino, substituted amino, cyano, and -S(O)_nR, where R is alkyl, aryl, or heteroaryl and n is 0, 1 or 2.

5 The term "halogen" or "halo" refers to fluoro, bromo, chloro, and iodo.

The term "acyl" denotes a group -C(O)R, in which R is hydrogen, optionally substituted alkyl, optionally substituted cycloalkyl, optionally substituted heterocyclyl, optionally substituted aryl, and optionally substituted heteroaryl.

The term "heteroaryl" refers to an aromatic cyclic group (i.e., fully unsaturated) having 1,
10 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, or 15 carbon atoms and 1, 2, 3 or 4 heteroatoms selected from oxygen, nitrogen and sulfur within at least one ring. Such heteroaryl groups can have a single ring (e.g., pyridyl or furyl) or multiple condensed rings (e.g., indolizinyl, benzothiazolyl, or benzothieryl). Examples of heteroaryls include, but are not limited to, [1,2,4]oxadiazole, [1,3,4]oxadiazole, [1,2,4]thiadiazole, [1,3,4]thiadiazole, pyrrole, imidazole, pyrazole, pyridine,
15 pyrazine, pyrimidine, pyridazine, indolizine, isoindole, indole, indazole, purine, quinolizine, isoquinoline, quinoline, phthalazine, naphthylpyridine, quinoxaline, quinazoline, cinnoline, pteridine, carbazole, carboline, phenanthridine, acridine, phenanthroline, isothiazole, phenazine, isoxazole, phenoxazine, phenothiazine, imidazolidine, imidazoline, and the like as well as N-alkoxy-nitrogen containing heteroaryl compounds.

20 The term "heteroarylene" refers to a diradical of a heteroaryl group as defined above. This term is exemplified by groups such as 2,5-imidazolene, 3,5-[1,2,4]oxadiazolene, 2,4-oxazolene, 1,4-pyrazolene, and the like. For example, 1,4-pyrazolene is:

where A represents the point of attachment.

25 Unless otherwise constrained by the definition for the heteroaryl or heteroarylene substituent, such heteroaryl or heteroarylene groups can be optionally substituted with 1 to 5 substituents, preferably 1 to 3 substituents selected from the group consisting of alkyl, alkenyl, alkynyl, alkoxy, cycloalkyl, cycloalkenyl, acyl, acylamino, acyloxy, amino, aminocarbonyl, alkoxycarbonylamino, azido, cyano, halogen, hydroxy, keto, thiocarbonyl, carboxy,
30 carboxyalkyl, arylthio, heteroarylthio, heterocyclylthio, thiol, alkylthio, aryl, aryloxy, heteroaryl, aminosulfonyl, aminocarbonylamino, heteroaryloxy, heterocyclyl, heterocycloxy, hydroxyamino, alkoxyamino, nitro, -SO-alkyl, -SO-aryl, -SO-heteroaryl, -SO₂-alkyl, SO₂-aryl

and -SO₂-heteroaryl. Unless otherwise constrained by the definition, all substituents may optionally be further substituted by 1-3 substituents chosen from alkyl, carboxy, carboxyalkyl, aminocarbonyl, hydroxy, alkoxy, halogen, CF₃, amino, substituted amino, cyano, and -S(O)_nR, where R is alkyl, aryl, or heteroaryl and n is 0, 1 or 2.

5 The term "heteroaralkyl" refers to a heteroaryl group covalently linked to an alkylene group, where heteroaryl and alkylene are defined herein. "Optionally substituted heteroaralkyl" refers to an optionally substituted heteroaryl group covalently linked to an optionally substituted alkylene group. Such heteroaralkyl groups are exemplified by 3-pyridylmethyl, quinolin-8-ylethyl, 4-methoxythiazol-2-ylpropyl, and the like.

10 The term "heteroaryloxy" refers to the group heteroaryl-O-.

 The term "heterocyclyl" refers to a monoradical saturated or partially unsaturated group having a single ring or multiple condensed rings, having from 1 to 40 carbon atoms and from 1 to 10 hetero atoms, preferably 1, 2, 3 or 4 heteroatoms, selected from nitrogen, sulfur, phosphorus, and/or oxygen within the ring. Heterocyclic groups can have a single ring or
15 multiple condensed rings, and include tetrahydrofuranyl, morpholino, piperidinyl, piperazino, dihydropyridino, and the like.

 Unless otherwise constrained by the definition for the heterocyclic substituent, such heterocyclic groups can be optionally substituted with 1, 2, 3, 4 or 5, and preferably 1, 2 or 3 substituents, selected from the group consisting of alkyl, alkenyl, alkynyl, alkoxy, cycloalkyl, cycloalkenyl, acyl, acylamino, acyloxy, amino, aminocarbonyl, alkoxycarbonylamino, azido,
20 cyano, halogen, hydroxy, keto, thiocarbonyl, carboxy, carboxyalkyl, arylthio, heteroarylthio, heterocyclylthio, thiol, alkylthio, aryl, aryloxy, heteroaryl, aminosulfonyl, aminocarbonylamino, heteroaryloxy, heterocyclyl, heterocyclooxy, hydroxyamino, alkoxyamino, nitro, -SO-alkyl, -SO-aryl, -SO-heteroaryl, -SO₂-alkyl, SO₂-aryl and -SO₂-heteroaryl. Unless otherwise constrained
25 by the definition, all substituents may optionally be further substituted by 1-3 substituents chosen from alkyl, carboxy, carboxyalkyl, aminocarbonyl, hydroxy, alkoxy, halogen, CF₃, amino, substituted amino, cyano, and -S(O)_nR, where R is alkyl, aryl, or heteroaryl and n is 0, 1 or 2.

 The term "thiol" refers to the group -SH.

 The term "substituted alkylthio" refers to the group -S-substituted alkyl.

30 The term "heteroarylthiol" refers to the group -S-heteroaryl wherein the heteroaryl group is as defined above including optionally substituted heteroaryl groups as also defined above.

 The term "sulfoxide" refers to a group -S(O)R, in which R is alkyl, aryl, or heteroaryl.

 "Substituted sulfoxide" refers to a group -S(O)R, in which R is substituted alkyl, substituted aryl, or substituted heteroaryl, as defined herein.

35 The term "sulfone" refers to a group -S(O)₂R, in which R is alkyl, aryl, or heteroaryl.

"Substituted sulfone" refers to a group $-S(O)_2R$, in which R is substituted alkyl, substituted aryl, or substituted heteroaryl, as defined herein.

The term "keto" refers to a group $-C(O)-$. The term "thiocarbonyl" refers to a group $-C(S)-$. The term "carboxy" refers to a group $-C(O)-OH$.

5 "Optional" or "optionally" means that the subsequently described event or circumstance may or may not occur, and that the description includes instances where said event or circumstance occurs and instances in which it does not.

The term "compound of Formula I and Formula II" is intended to encompass the compounds of the invention as disclosed, and the pharmaceutically acceptable salts,
10 pharmaceutically acceptable esters, prodrugs, hydrates and polymorphs of such compounds. Additionally, the compounds of the invention may possess one or more asymmetric centers, and can be produced as a racemic mixture or as individual enantiomers or diastereoisomers. The number of stereoisomers present in any given compound of Formula I depends upon the number of asymmetric centers present (there are 2^n stereoisomers possible where n is the number of
15 asymmetric centers). The individual stereoisomers may be obtained by resolving a racemic or non-racemic mixture of an intermediate at some appropriate stage of the synthesis, or by resolution of the compound of Formula I by conventional means. The individual stereoisomers (including individual enantiomers and diastereoisomers) as well as racemic and non-racemic mixtures of stereoisomers are encompassed within the scope of the present invention, all of
20 which are intended to be depicted by the structures of this specification unless otherwise specifically indicated.

"Isomers" are different compounds that have the same molecular formula.

"Stereoisomers" are isomers that differ only in the way the atoms are arranged in space.

"Enantiomers" are a pair of stereoisomers that are non-superimposable mirror images of
25 each other. A 1:1 mixture of a pair of enantiomers is a "racemic" mixture. The term " (\pm) " is used to designate a racemic mixture where appropriate.

"Diastereoisomers" are stereoisomers that have at least two asymmetric atoms, but which are not mirror-images of each other.

The absolute stereochemistry is specified according to the Cahn-Ingold-Prelog R-S
30 system. When the compound is a pure enantiomer the stereochemistry at each chiral carbon may be specified by either R or S. Resolved compounds whose absolute configuration is unknown are designated (+) or (-) depending on the direction (dextro- or laevorotary) which they rotate the plane of polarized light at the wavelength of the sodium D line.

The term "therapeutically effective amount" refers to that amount of a compound of
35 Formula I that is sufficient to effect treatment, as defined below, when administered to a

mammal in need of such treatment. The therapeutically effective amount will vary depending upon the subject and disease condition being treated, the weight and age of the subject, the severity of the disease condition, the manner of administration and the like, which can readily be determined by one of ordinary skill in the art.

5 The term "treatment" or "treating" means any treatment of a disease in a mammal, including:

- (i) preventing the disease, that is, causing the clinical symptoms of the disease not to develop;
- (ii) inhibiting the disease, that is, arresting the development of clinical symptoms; and/or
- 10 (iii) relieving the disease, that is, causing the regression of clinical symptoms.

In many cases, the compounds of this invention are capable of forming acid and/or base salts by virtue of the presence of amino and/or carboxyl groups or groups similar thereto. The term "pharmaceutically acceptable salt" refers to salts that retain the biological effectiveness and properties of the compounds of Formula I, and which are not biologically or otherwise

15 undesirable. Pharmaceutically acceptable base addition salts can be prepared from inorganic and organic bases. Salts derived from inorganic bases, include by way of example only, sodium, potassium, lithium, ammonium, calcium and magnesium salts. Salts derived from organic bases include, but are not limited to, salts of primary, secondary and tertiary amines, such as alkyl amines, dialkyl amines, trialkyl amines, substituted alkyl amines, di(substituted alkyl) amines,

20 tri(substituted alkyl) amines, alkenyl amines, dialkenyl amines, trialkenyl amines, substituted alkenyl amines, di(substituted alkenyl) amines, tri(substituted alkenyl) amines, cycloalkyl amines, di(cycloalkyl) amines, tri(cycloalkyl) amines, substituted cycloalkyl amines, disubstituted cycloalkyl amine, trisubstituted cycloalkyl amines, cycloalkenyl amines, di(cycloalkenyl) amines, tri(cycloalkenyl) amines, substituted cycloalkenyl amines, disubstituted

25 cycloalkenyl amine, trisubstituted cycloalkenyl amines, aryl amines, diaryl amines, triaryl amines, heteroaryl amines, diheteroaryl amines, triheteroaryl amines, heterocyclic amines, diheterocyclic amines, triheterocyclic amines, mixed di- and tri-amines where at least two of the substituents on the amine are different and are selected from the group consisting of alkyl, substituted alkyl, alkenyl, substituted alkenyl, cycloalkyl, substituted cycloalkyl, cycloalkenyl,

30 substituted cycloalkenyl, aryl, heteroaryl, heterocyclic, and the like. Also included are amines where the two or three substituents, together with the amino nitrogen, form a heterocyclic or heteroaryl group.

Specific examples of suitable amines include, by way of example only, isopropylamine, trimethyl amine, diethyl amine, tri(iso-propyl) amine, tri(n-propyl) amine, ethanolamine, 2-

35 dimethylaminoethanol, tromethamine, lysine, arginine, histidine, caffeine, procaine,

hydrabamine, choline, betaine, ethylenediamine, glucosamine, N-alkylglucamines, theobromine, purines, piperazine, piperidine, morpholine, N-ethylpiperidine, and the like.

Pharmaceutically acceptable acid addition salts may be prepared from inorganic and organic acids. Salts derived from inorganic acids include hydrochloric acid, hydrobromic acid, sulfuric acid, nitric acid, phosphoric acid, and the like. Salts derived from organic acids include acetic acid, propionic acid, glycolic acid, pyruvic acid, oxalic acid, malic acid, malonic acid, succinic acid, maleic acid, fumaric acid, tartaric acid, citric acid, benzoic acid, cinnamic acid, mandelic acid, methanesulfonic acid, ethanesulfonic acid, p-toluene-sulfonic acid, salicylic acid, and the like.

As used herein, "pharmaceutically acceptable carrier" includes any and all solvents, dispersion media, coatings, antibacterial and antifungal agents, isotonic and absorption delaying agents and the like. The use of such media and agents for pharmaceutically active substances is well known in the art. Except insofar as any conventional media or agent is incompatible with the active ingredient, its use in the therapeutic compositions is contemplated. Supplementary active ingredients can also be incorporated into the compositions.

Nomenclature

The naming and numbering of the compounds of the invention is illustrated with a representative compound of Formula I in which R¹ is n-propyl, R² is n-propyl, R³ is hydrogen, X is phenylene, Y is -O-(CH₂), and Z is 5-(2-methoxyphenyl)-[1,2,4]-oxadiazol-3-yl,

which is named:

8-{4-[5-(2-methoxyphenyl)-[1,2,4]-oxadiazol-3-ylmethoxy]-phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione.

Synthetic Reaction Parameters

The terms "solvent", "inert organic solvent" or "inert solvent" mean a solvent inert under the conditions of the reaction being described in conjunction therewith [including, for example,

benzene, toluene, acetonitrile, tetrahydrofuran ("THF"), dimethylformamide ("DMF"), chloroform, methylene chloride (or dichloromethane), diethyl ether, methanol, pyridine and the like]. Unless specified to the contrary, the solvents used in the reactions of the present invention are inert organic solvents.

- 5 The term "q.s." means adding a quantity sufficient to achieve a stated function, e.g., to bring a solution to the desired volume (i.e., 100%).

Synthesis of the Compounds of Formula I

- 10 The compounds of Formula I where R^1 and R^2 are the same, R^3 is hydrogen, and Y includes an oxygen, sulfur or nitrogen atom may be prepared as shown in Reaction Scheme I.

15

20

25

30

REACTION SCHEME 1

Formula I where R^3 is hydrogen

where Bz is benzyl, Boc is t-butyloxycarbonyl, and L is -O-, -S-, or -NH-.

Note that when R^3 is hydrogen, Formula I and II are the same compound as a consequence of tautomerism.

5 Step 1 - Preparation of Formula (2)

The compound of formula (1), which is protected at the N-7 position, is commercially available, or may be prepared by means well known in the art (see, for example, Synthetic Communications, 20(16), 2459-2467 (1990)). The compound of formula (1) is reacted with at least two equivalents of a compound of formula R^1LG , where LG is a leaving group, preferably chlorine, bromine, or iodine, in the presence of a strong base, for example sodium hydride. The reaction is carried out in a polar solvent, for example DMF, initially at a temperature of about room temperature, followed by reaction at a temperature of about 30-100°C, for example about 70°C, for about 6-24 hours. When the reaction is substantially complete, the product of formula (2) is isolated by conventional means, for example by removal of the solvent under reduced pressure, followed by chromatography of the residue on silica gel.

It should be noted that this reaction only provides compounds of formula (2) in which R^1 and R^2 are the same. A procedure for preparing compounds of formula (2) in which R^1 and R^2

are different is shown below in Reaction Scheme III.

A different synthesis is required for the preparation of compounds of formula (2) in which R^1 and/or R^2 are aryl or heteroaryl groups, and is shown in Reaction Scheme III.

5 Step 2 - Preparation of Formula (3)

The compound of formula (2) is then halogenated at the 8-position, to give a compound of formula (3), by reaction with a halogenating agent, for example N-chlorosuccinimide, to give the 8-chloro compound of formula (3). In general, the compound of formula (2) is dissolved in an inert solvent, for example tetrahydrofuran, and N-bromosuccinimide (or N-chlorosuccinimide) is added. The reaction is carried out at a temperature of about 0-30°C, for example about room temperature, for about 1-10 hours, for example about 4 hours. When the reaction is substantially complete, the product of formula (3) is isolated by conventional means, and recrystallized.

Step 3 - Preparation of Formula (4)

15 The compound of formula (3) is then converted to a compound of formula (4) by reaction with an appropriately substituted boronic acid derivative in the presence of a palladium(0) complex. For example, where X is optionally substituted phenyl, the compound of formula (3) is reacted with an optionally substituted phenylboronic acid. The reaction is carried out in an inert solvent, for example toluene/ethanol, in the presence of aqueous sodium carbonate solution and tetrakis(triphenylphosphine)-palladium(0), at about reflux temperature for about 24 hours. When the reaction is substantially complete, the product of formula (4) is isolated by conventional means, for example by removing the solvent under reduced pressure, followed by chromatography of the residue on silica gel.

Step 4 - Preparation of Formula (5)

25 a) The benzyl protecting group of the compound of formula (4) is then replaced by Boc, to give the compound of formula (5). In general, the compound of formula (4) is dissolved in an inert solvent, for example methanol, and a hydrogenation catalyst added. The reaction is stirred under an atmosphere of hydrogen, at a temperature of about 0-30°C, for example about room temperature, for about 8-24 hours, for example about 18 hours. When the reaction is substantially complete, the catalyst is removed by filtration, and the product isolated by conventional means.

30 b) The product is then dissolved in an inert solvent, for example methanol, to which was added an excess of di t-butylidicarbonate and a hindered base, for example ethyldiisopropylamine. The mixture is refluxed for about 8-24 hours, for example about 18 hours. When the reaction is substantially complete, the catalyst is removed by filtration, and the

compound of formula (5) isolated by conventional means, for example by removing the solvent under reduced pressure, followed by chromatography of the residue on silica gel.

Step 5 - Preparation of Formula I where R^3 is Hydrogen

5 The compound of formula (5) is then converted to a compound of Formula I by reaction with a compound of the formula Z-Y-LG, where Z and Y are as defined above and LG is a leaving group, preferably a halogen, more preferably chloro (the Boc protecting group is removed simultaneously). The reaction is carried out in the presence of a strong base, for example sodium hydride, in an inert polar solvent, preferably DMF, at a temperature of about 0-
10 30°C, preferably about room temperature, for about 8-24 hours, preferably about 16 hours. The BOC protecting group is also removed in this reaction sequence. When the reaction is substantially complete, the product of Formula I where R^3 is hydrogen is isolated by conventional means, for example by chromatography on silica gel.

15 Step 5 - Preparation of Formula I where R^3 is other than Hydrogen

 A compound of Formula I in which R^3 is hydrogen may be converted to a compound of Formula I in which R^3 is not hydrogen by reaction with a compound of formula R^3 -LG, where LG is a leaving group, preferably iodo or bromo. The reaction is carried out in the presence of a mild base, for example potassium carbonate, in an inert polar solvent, preferably DMF, at a
20 temperature of about 30-100°C, preferably about 70°C, for about 8-24 hours, preferably about 16 hours. When the reaction is substantially complete, the product of Formula I where R^3 is other than hydrogen is isolated by conventional means, for example by chromatography on silica gel.

 Alternatively, the benzyl protecting group of formula (4) may be replaced by a trimethylsilyl-ethoxymethyl protecting group (instead of a BOC group), the subsequent removal
25 of which can be accomplished under milder reaction conditions. In general, the product of Step 4a is dissolved in an inert solvent, preferably anhydrous DMF (100mL), and reacted with trimethylsilyl-ethoxymethyl chloride in the presence of a base, preferably potassium carbonate. The reaction is conducted at a temperature of about 50-90°C, preferably about 70°C, for about 1-6 days, preferably about 72 hours. When the reaction is substantially complete, the catalyst is
30 removed by filtration, and the product isolated by conventional means, preferably flash chromatography.

 The product is then reacted with Z-Y-LG, where Z and Y are as defined above and LG is a leaving group, as shown in step 5 above. The trimethylsilyl-ethoxymethyl protecting group is removed from the resulting intermediate compound by treatment by acid in a protic solvent,
35 preferably hydrochloric acid in ethanol, to give a compound of Formula I.

Alternatively, the benzyl group of the starting material of formula (1) can be replaced by BOC before the halogenation of step 2. In this manner, there is no need to change the protecting group from benzyl to BOC as outlined above in step 4:

- 5 An alternative method for preparing the compounds of Formula I where R^3 is hydrogen, Z is an optionally substituted 1,2,4-oxadiazole, and preferably Y is oxygen, is shown in Reaction Scheme II.

Formula I where R^3 is hydrogen
Y is oxygen, and Z is optionally substituted
1,2,4-oxadiazole

10

Step 1 - Preparation of Formula (7)

- The compound of formula (6) is prepared in a manner similar to that shown above for compound (4). It is deprotected by treatment with hydrogen in the presence of a catalyst, preferably Pd on carbon. The hydroxy compound thus produced is reacted with tert-butyltrimethylsilyl chloride in the presence of imidazole to give the tert-butyltrimethylsilyloxy derivative. This compound is reacted with sodium hydride, and the anion thus produced is reacted with benzyloxymethyl chloride to provide a compound that is protected at the N-7
- 15

position by benzyloxymethyl. The tert-butyldimethylsilyl protecting group is then removed by the usual means, for example treatment with tetrabutylammonium fluoride, and the resulting hydroxy compound is reacted with iodoacetonitrile or chloroacetonitrile, in the presence of a strong base, for example potassium t-butoxide. The reaction is carried out in an inert solvent, preferably tetrahydrofuran at about room temperature, for about 6-24 hours. When the reaction is substantially complete, the product of formula (7) is isolated by conventional means, for example by removal of the solvent under reduced pressure, followed by chromatography of the residue on silica gel.

10 Step 2 - Preparation of Formula (8)

The compound of formula (7) is then reacted with hydroxylamine hydrochloride. In general, the compound of formula (7) is dissolved in an inert solvent, for example ethanol, and hydroxylamine hydrochloride is added, along with an equivalent amount of a strong base, for example sodium ethoxide. The reaction is carried out at a temperature of about 0-30°C, for example about room temperature, for about 6-24 hours. When the reaction is substantially complete, the product of formula (8) is isolated by conventional means, for example by removal of the solvent under reduced pressure, followed by chromatography of the residue on silica gel.

Step 3 - Preparation of Formula I

20 The compound of formula (8) is then cyclized to an optionally substituted 1,2,4-oxadiazole of Formula I by reaction with an appropriately substituted acid chloride of formula $RC(O)Cl$, in which R represents an optional substitution that leads to 5-substitution on the oxadiazole ring. In general, the compound of formula (8) is dissolved in an inert solvent, for example dioxane, and potassium carbonate and the acid chloride added. The mixture is allowed to react for about 10 minutes at a temperature of about 0-30°C, preferably about room temperature. When the reaction is substantially complete, the intermediate is isolated conventionally, and dissolved in a high boiling inert solvent, for example xylene. The mixture is reacted for about 6-24 hours, at a temperature of about 100-160°C, preferably about 145°C. The product of Formula I is isolated by conventional means, for example by removal of the solvent under reduced pressure, followed by chromatography of the residue on silica gel.

30 A method for preparing compounds of Formula I in which R^1 and R^2 are not the same is shown in Reaction Scheme III.

REACTION SCHEME III

where R^1 and R^2 are as defined above, Bz is benzyl, and Hal is chloro, bromo, or iodo.

In general, the procedure is carried out as described in Synthetic Communications, 20(16), 2459-2467 (1990). The reaction scheme takes advantage of the fact that xanthines are well known to react with alkylating agents in the order $\text{N3} > \text{N7} > \text{N1}$. With N7 protected, as in the compound of formula (1), reaction with a compound of formula R^2LG , where LG is a leaving group, preferably chlorine, bromine, or iodine, with a slight excess of R^2LG in the same manner as shown above for the preparation of a compound of formula (2) provides the compound of formula (9). Further reaction of (9) with a compound of formula R^1LG provides the compound of formula (10) in which R^1 and R^2 are different.

A method for preparing compounds of formula (2) in which R^2 is hydrogen or alkyl and R^1 is aryl or heteroaryl is shown in Reaction Scheme IV.

15

REACTION SCHEME IV

The compounds of formula (2) in which R^1 is aryl or heteroaryl may be prepared as described in Synthesis, 1995, p855-858. In general, a compound of formula (11), prepared by means well known in the art, is reacted with an appropriately substituted isocyanate of formula R^1NCO to provide a compound of formula (12), which is cyclized under basic conditions, for example treatment with sodium ethoxide, to provide a compound of formula (2) in which R^1 is aryl or heteroaryl and R^2 is hydrogen. This method can also be used to provide compounds in which R^1 is alkyl etc.

The compound of formula (2) in which R^2 is hydrogen can then be further reacted with an alkyl halide of formula R^2hal in the same manner as shown in Reaction Scheme I to provide a compound of formula (2) in which R^1 is aryl or heteroaryl and R^2 is alkyl.

Compounds of formula (2) in which R^1 and R^2 are both aryl or heteroaryl are prepared as shown in Chem. Ber., GE; 111; 1978; 982-995.

A method for preparing compounds of Formula I in which R^3 is not hydrogen is shown in Reaction Scheme V.

REACTION SCHEME V

Preparation of Formula (13)

The benzyl protecting group of the compound of formula (2) is removed by hydrogenation as described in Reaction Scheme I, step 4. The resulting compound is then reacted with a compound of formula R^3LG , where LG is a leaving group, preferably chlorine, bromine, or iodine, in the presence of a base, for example potassium carbonate. The reaction is carried out in a polar solvent, for example DMF, initially at a temperature of about room temperature, followed by reaction at a temperature of about 30-100°C, for example about 70°C, for about 6-24 hours. When the reaction is substantially complete, the product of formula (13) is

isolated by conventional means, for example by removal of the solvent under reduced pressure, followed by chromatography of the residue on silica gel.

The reaction is disclosed in more detail in J. Med. Chem., 1999, 42, 2527-2534.

5 An alternative method for preparing compounds of Formula I is shown in Reaction Scheme VI. Coupling of the 8-chloro derivative of formula (14) with a compound of formula $(\text{HO})_2\text{B-X-Y-Z}$ is a convenient method for providing compounds of Formula I without a heteroatom in the chain.

10

15

REACTION SCHEME VI

PREPARATION OF A COMPOUND OF FORMULA II

20 The preparation of a compound of Formula II is carried out in the same manner as shown above in Reaction Scheme I, II and III, starting with a compound of the formula (18), the preparation of which is shown in Reaction Scheme VII

25

5

10

REACTION SCHEME VII

Similar reaction sequences are disclosed in U.S. Patent No. 5,631,260, the complete disclosure of which is hereby incorporated by reference.

15 It should be noted that if RCO_2H (or RCOCl) is used in place of formic acid, a compound of formula (18) that is substituted at the 8-position by R will result. Thus, if RCO_2H is equivalent to ZYXCO_2H (a compound of formula (22)), an alternative synthesis of a compound of Formula II can be accomplished, as shown in Reaction Scheme VIII.

20

5

REACTION SCHEME VIII

It should be noted that if R^3 is hydrogen, a compound of Formula I or II is produced.

10 The compound of formula (19) is commercially available, or is prepared by means well known in the art. It is converted into a compound of Formula II (or a compound of Formula I when R^3 is hydrogen) as described in U.S. Patent No. 5,446,046, the complete disclosure of which is hereby incorporated by reference.

15 A similar reaction can be carried out starting with a nitroso amino derivative of the formula (23).

Reduction of the compound of formula (23) with hydrogen/platinum oxide catalyst provides the corresponding diamino compound of (21) in which R^3 is hydrogen. Alternatively, the compound of formula (23) can be first substituted with R^3 as described in Reaction Scheme VII above, to provide the corresponding diamino compound of formula (21) where R^3 is other than hydrogen.

Alternatively, a compound of formula (23) can be converted to a compound of Formula I in which R^2 is hydrogen and R^1 is other than hydrogen as shown in Reaction Scheme IX.

10

REACTION SCHEME IX

Step 1 - Preparation of Formula (23)

The commercially available compound 6-aminouracil is first silylated, for example by reaction with hexamethyldisilazane as a solvent in the presence of a catalyst, for example ammonium sulfate. The reaction is carried out at about reflux temperature, for about 1-10 hours. When the reaction is substantially complete, the silylated compound thus produced is isolated conventionally, and then reacted with a compound of formula $R^1\text{Hal}$, where R^1 is as defined above, preferably in the absence of a solvent. The reaction is carried out at about reflux, for about 12 hours to 7 days. When the reaction is substantially complete, the product of formula (23) is isolated by conventional means.

Step 2 - Preparation of Formula (24)

The compound of formula (23) is then dissolved in an aqueous acid, for example aqueous acetic acid, and reacted with sodium nitrite. The reaction is carried out at a temperature of about 20-50°C, preferably about 30°C, over about 30 minutes. When the reaction is substantially complete, the product of formula (24) is isolated by conventional means, for example by filtration.

Step 3 - Preparation of Formula (25)

The compound of formula (24) is then reduced to a diamino derivative. In general, the compound of formula (24) is dissolved in aqueous ammonia, and then a reducing agent, for example sodium hydrosulfite, added. The reaction is conducted at a temperature of about 70°C. When the reaction is substantially complete, the product of formula (25) is isolated conventionally, for example by filtration of the cooled reaction mixture.

Step 4 - Preparation of Formula I

The compound of formula (25) is then reacted with a carboxylic acid of the formula Z-Y-X-CO₂H in the presence of a carbodiimide, for example 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride. The reaction is conducted at a temperature of about 20-30°C, for about 12-48 hours. The product is isolated conventionally, for example by filtration, and reacted with excess hexamethyldisilazane in the presence of ammonium sulfate, for about 2 days at reflux. When the reaction is substantially complete, the product of Formula I is isolated conventionally, for example by filtration of the cooled reaction mixture.

A specific example of the preparation shown in Reaction Scheme IX, where X is optionally substituted 1,4-pyrazolene, is shown in Reaction Scheme X.

REACTION SCHEME X

where SEM is 2,2-(trimethylsilyl)ethoxymethyl and halo is chloro, bromo, or iodo.

This reaction is described in more detail in the following examples.

5 An example of a synthesis of a compound of formula (22) is shown in Reaction Scheme XI:

10

15

REACTION SCHEME XI

20

The reaction is carried out as shown in Example 9. The pyrazole product of formula (22) is then reacted with a compound of formula (21) or (25) as described above, and in Example 9, to provide a compound of Formula II (and Formula I if R^3 is hydrogen):

Formula I or II

10

The preparation of a compound of Formula I in which R^1 is hydrogen and R^2 is other than hydrogen from a compound of formula (23) is shown in Reaction Scheme XII.

15

REACTION SCHEME XII

Step 1 - Preparation of Formula (31)

The compound of formula (30) is either commercially available or prepared by means well known in the art. It is reacted with ethyl cyanoacetate in a protic solvent, for example ethanol, in the presence of a strong base, for example sodium ethoxide. The reaction is carried out at about reflux temperature, for about 4 to about 24 hours. When the reaction is substantially complete, the compound of formula (31) thus produced is isolated conventionally.

Step 2 - Preparation of Formula (23)

The compound of formula (31) is then mixed with sodium nitrite in an aqueous solvent, for example dimethylformamide and water, and reacted with a strong acid, for example hydrochloric acid, to produce the nitroso compound of formula (23). The reaction is carried out at a temperature of about 50°C to about 100°C, for about 1 hour. When the reaction is substantially complete, the product of formula (23) is isolated by conventional means.

Step 3 - Preparation of Formula (21)

The compound of formula (23) is then reduced to a diamino derivative. In general, the compound of formula (23) is dissolved in aqueous ammonia, and then a reducing agent, for example sodium hydrosulfite, added. The reaction is conducted at a temperature of about 70°C. When the reaction is substantially complete, the product of formula (21) is isolated conventionally, for example by filtration of the cooled reaction mixture.

Step 4 - Preparation of Formula I

The compound of formula (21) is then reacted with a carboxylic acid of the formula Z-Y-X-CO₂H in the same manner as described for Reaction Scheme IX, step 4, to produce a compound of Formula I.

The compound of formula (31) can be used in an alternative synthesis to prepare a compound of Formula I in which R^1 is hydrogen and R^2 is other than hydrogen, or both R^1 and R^2 are other than hydrogen and are the same or different, as shown in Reaction Scheme XIII.

5

REACTION SCHEME XIII

Steps 1 and 2

10 The compound of formula (31), prepared as shown above, is reacted with the dimethylacetal of N,N-dimethylformamide in a polar solvent, for example N,N-dimethylformamide. The reaction is carried out at about 40°C, for about 1 hour. When the reaction is substantially complete, the compound of formula (32) thus produced is reacted with a compound of formula R^1Hal , where Hal is chloro, bromo, or iodo, in the presence of a base, for example potassium carbonate. The reaction is carried out at about 80°C, for about 4-24 hour. When the reaction is substantially complete, the product of formula (33) is isolated conventionally, for example by evaporation of the solvents under reduced pressure, and the residue is used in the next reaction with no further purification.

20 Step 2

The compound of formula (33) is reacted with aqueous ammonia in a polar solvent, for example suspended in methanol. The reaction is carried out at about room temperature, for about 1-3 days. When the reaction is substantially complete, the product of formula (33) is isolated conventionally, for example by evaporation of the solvents under reduced pressure, and 25 triturating the residue with water.

The compound of formula (34) is then converted to a compound of Formula I in the same manner as shown above for the preparation of the compound of formula (23) in Reaction Scheme IX.

5

PREFERRED PROCESSES AND LAST STEPS

The compounds of the present invention can be prepared according to the following last steps:

10

- 15 1. Contacting a compound of the formula:

in which R^1 , R^2 , and X are as defined in the Summary of the Invention, L is -O-, -S-, or -NH-, and Boc is is t-butyloxycarbonyl;

- 20 with a compound of the formula Z-Y-LG, in which Z and Y are as defined in the Summary of the Invention, and LG is a leaving group..

2. Contacting a compound of the formula:

Formula I where R^3 is hydrogen

in which R^1 , R^2 , and X, Y and Z are as defined in the Summary of the Invention:

- 25 with a compound of the formula R^3 -LG, where R^3 is as defined in the Summary of the Invention,

and LG is a leaving group.

3. Contacting a compound of the formula:

5 in which R^1 , R^2 , and X are as defined in the Summary of the Invention:

with an acid chloride of the formula $RC(O)Cl$, in which R represents an optional substitution that leads to 5-substitution on the oxadiazole ring;

to provide a compound of Formula I in which Y is oxygen, and Z is optionally substituted 1,2,4-oxadiazole.

10

4. Contacting a compound of the formula:

in which R^1 , R^2 , and R^3 are as defined in the Summary of the Invention:

with a compound of formula $(HO)_2B-X-Y-Z$, in which X, Y and Z are as defined in the

15

5. Contacting a compound of the formula:

in which R^1 , R^2 , and R^3 are as defined in the Summary of the Invention:

20 with a compound of the formula $ZYXCO_2H$ (a compound of formula (22)), in which X, Y and Z are as defined in the Summary of the Invention.

Utility, Testing and Administration

General Utility

5 The compounds of Formula I and II are effective in the treatment of conditions that respond to administration of A_{2B} adenosine receptor antagonists. Such conditions include, but are not limited to, at least one of diarrhea, atherosclerosis, restenosis, diabetic retinopathy, cancer, senile dementia, Alzheimer's disease, Parkinson's disease, traumatic brain injury, and Type I hypersensitivity reactions, including asthma, atopic eczema, and hay fever.

10 Testing

Activity testing is conducted as described in those patents and patent applications referenced above, and in the Examples below, and by methods apparent to one skilled in the art.

Pharmaceutical Compositions

15 The compounds of Formula I are usually administered in the form of pharmaceutical compositions. This invention therefore provides pharmaceutical compositions that contain, as the active ingredient, one or more of the compounds of Formula I, or a pharmaceutically acceptable salt or ester thereof, and one or more pharmaceutically acceptable excipients, carriers, including inert solid diluents and fillers, diluents, including sterile aqueous solution and various organic solvents, permeation enhancers, solubilizers and adjuvants. The compounds of Formula
20 I may be administered alone or in combination with other therapeutic agents. Such compositions are prepared in a manner well known in the pharmaceutical art (see, e.g., Remington's Pharmaceutical Sciences, Mace Publishing Co., Philadelphia, PA 17th Ed. (1985) and "Modern Pharmaceutics", Marcel Dekker, Inc. 3rd Ed. (G.S. Banker & C.T. Rhodes, Eds.).

Administration

25 The compounds of Formula I may be administered in either single or multiple doses by any of the accepted modes of administration of agents having similar utilities, for example as described in those patents and patent applications incorporated by reference, including rectal, buccal, intranasal and transdermal routes, by intra-arterial injection, intravenously, intraperitoneally, parenterally, intramuscularly, subcutaneously, orally, topically, as an inhalant,
30 or via an impregnated or coated device such as a stent, for example, or an artery-inserted cylindrical polymer.

One mode for administration is parental, particularly by injection. The forms in which the novel compositions of the present invention may be incorporated for administration by injection include aqueous or oil suspensions, or emulsions, with sesame oil, corn oil, cottonseed
35 oil, or peanut oil, as well as elixirs, mannitol, dextrose, or a sterile aqueous solution, and similar

pharmaceutical vehicles. Aqueous solutions in saline are also conventionally used for injection, but less preferred in the context of the present invention. Ethanol, glycerol, propylene glycol, liquid polyethylene glycol, and the like (and suitable mixtures thereof), cyclodextrin derivatives, and vegetable oils may also be employed. The proper fluidity can be maintained, for example, by the use of a coating, such as lecithin, by the maintenance of the required particle size in the case of dispersion and by the use of surfactants. The prevention of the action of microorganisms can be brought about by various antibacterial and antifungal agents, for example, parabens, chlorobutanol, phenol, sorbic acid, thimerosal, and the like.

Sterile injectable solutions are prepared by incorporating the compound of Formula I in the required amount in the appropriate solvent with various other ingredients as enumerated above, as required, followed by filtered sterilization. Generally, dispersions are prepared by incorporating the various sterilized active ingredients into a sterile vehicle which contains the basic dispersion medium and the required other ingredients from those enumerated above. In the case of sterile powders for the preparation of sterile injectable solutions, the preferred methods of preparation are vacuum-drying and freeze-drying techniques which yield a powder of the active ingredient plus any additional desired ingredient from a previously sterile-filtered solution thereof.

Oral administration is another route for administration of the compounds of Formula I. Administration may be via capsule or enteric coated tablets, or the like. In making the pharmaceutical compositions that include at least one compound of Formula I, the active ingredient is usually diluted by an excipient and/or enclosed within such a carrier that can be in the form of a capsule, sachet, paper or other container. When the excipient serves as a diluent, it can be a solid, semi-solid, or liquid material (as above), which acts as a vehicle, carrier or medium for the active ingredient. Thus, the compositions can be in the form of tablets, pills, powders, lozenges, sachets, cachets, elixirs, suspensions, emulsions, solutions, syrups, aerosols (as a solid or in a liquid medium), ointments containing, for example, up to 10% by weight of the active compound, soft and hard gelatin capsules, sterile injectable solutions, and sterile packaged powders.

Some examples of suitable excipients include lactose, dextrose, sucrose, sorbitol, mannitol, starches, gum acacia, calcium phosphate, alginates, tragacanth, gelatin, calcium silicate, microcrystalline cellulose, polyvinylpyrrolidone, cellulose, sterile water, syrup, and methyl cellulose. The formulations can additionally include: lubricating agents such as talc, magnesium stearate, and mineral oil; wetting agents; emulsifying and suspending agents; preserving agents such as methyl- and propylhydroxy-benzoates; sweetening agents; and flavoring agents.

The compositions of the invention can be formulated so as to provide quick, sustained or delayed release of the active ingredient after administration to the patient by employing procedures known in the art. Controlled release drug delivery systems for oral administration include osmotic pump systems and dissolutional systems containing polymer-coated reservoirs or drug-polymer matrix formulations. Examples of controlled release systems are given in U.S. Patent Nos. 3,845,770; 4,326,525; 4,902,514; and 5,616,345. Another formulation for use in the methods of the present invention employs transdermal delivery devices ("patches"). Such transdermal patches may be used to provide continuous or discontinuous infusion of the compounds of the present invention in controlled amounts. The construction and use of transdermal patches for the delivery of pharmaceutical agents is well known in the art. *See, e.g.*, U.S. Patent Nos. 5,023,252, 4,992,445 and 5,001,139. Such patches may be constructed for continuous, pulsatile, or on demand delivery of pharmaceutical agents.

The compositions are preferably formulated in a unit dosage form. The term "unit dosage forms" refers to physically discrete units suitable as unitary dosages for human subjects and other mammals, each unit containing a predetermined quantity of active material calculated to produce the desired therapeutic effect, in association with a suitable pharmaceutical excipient (e.g., a tablet, capsule, ampoule). The compounds of Formula I are effective over a wide dosage range and is generally administered in a pharmaceutically effective amount. Preferably, for oral administration, each dosage unit contains from 10 mg to 2 g of a compound of Formula I; more preferably from 10 to 700 mg, and for parenteral administration, preferably from 10 to 700 mg of a compound of Formula I, more preferably about 50-200 mg. It will be understood, however, that the amount of the compound of Formula I actually administered will be determined by a physician, in the light of the relevant circumstances, including the condition to be treated, the chosen route of administration, the actual compound administered and its relative activity, the age, weight, and response of the individual patient, the severity of the patient's symptoms, and the like.

For preparing solid compositions such as tablets, the principal active ingredient is mixed with a pharmaceutical excipient to form a solid preformulation composition containing a homogeneous mixture of a compound of the present invention. When referring to these preformulation compositions as homogeneous, it is meant that the active ingredient is dispersed evenly throughout the composition so that the composition may be readily subdivided into equally effective unit dosage forms such as tablets, pills and capsules.

The tablets or pills of the present invention may be coated or otherwise compounded to provide a dosage form affording the advantage of prolonged action, or to protect from the acid conditions of the stomach. For example, the tablet or pill can comprise an inner dosage and an

outer dosage component, the latter being in the form of an envelope over the former. The two components can be separated by an enteric layer that serves to resist disintegration in the stomach and permit the inner component to pass intact into the duodenum or to be delayed in release. A variety of materials can be used for such enteric layers or coatings, such materials including a number of polymeric acids and mixtures of polymeric acids with such materials as shellac, cetyl alcohol, and cellulose acetate.

Compositions for inhalation or insufflation include solutions and suspensions in pharmaceutically acceptable, aqueous or organic solvents, or mixtures thereof, and powders. The liquid or solid compositions may contain suitable pharmaceutically acceptable excipients as described *supra*. Preferably the compositions are administered by the oral or nasal respiratory route for local or systemic effect. Compositions in preferably pharmaceutically acceptable solvents may be nebulized by use of inert gases. Nebulized solutions may be inhaled directly from the nebulizing device or the nebulizing device may be attached to a face mask tent, or intermittent positive pressure breathing machine. Solution, suspension, or powder compositions may be administered, preferably orally or nasally, from devices that deliver the formulation in an appropriate manner.

The following examples are included to demonstrate preferred embodiments of the invention. It should be appreciated by those of skill in the art that the techniques disclosed in the examples which follow represent techniques discovered by the inventor to function well in the practice of the invention, and thus can be considered to constitute preferred modes for its practice. However, those of skill in the art should, in light of the present disclosure, appreciate that many changes can be made in the specific embodiments which are disclosed and still obtain a like or similar result without departing from the spirit and scope of the invention.

25

EXAMPLE 1

Preparation of a Compound of Formula (2)

Preparation of a Compound of Formula (2) where R¹ and R² are both n-Propyl

To a solution of 7-benzyl-1,3,7-trihydropurine-2,6-dione (6.4g, 26.4 mmol), the compound of formula (1), in N,N-dimethylformamide (200ml) at room temperature was added sodium hydride (2.6g, 66 mmol). The mixture was stirred for 20 minutes, then iodopropane (6.5 ml, 66mmol) added, and stirred at room temperature for 3 hours. The mixture was then heated to 70°C and stirred overnight. The solvent was removed under reduced pressure, dissolved in dichloromethane, and passed through a silica gel plug, washing with 1:1 hexane/ethyl acetate. The solvent was removed under reduced pressure, affording crude 7-benzyl-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione (8.5g, 98% yield), which was used in the next reaction with no further purification.

B. Preparation of a Compound of Formula (2), varying R¹ and R²

Similarly, following the procedure of 1A above, but replacing iodopropane by other halides, the following compounds of formula (3) are prepared:

- 15 7-benzyl-1,3-dimethyl-1,3,7-trihydropurine-2,6-dione;
- 7-benzyl-1,3-diethyl-1,3,7-trihydropurine-2,6-dione;
- 7-benzyl-1,3-di(methoxyethyl)-1,3,7-trihydropurine-2,6-dione;
- 7-benzyl-1,3-di-n-butyl-1,3,7-trihydropurine-2,6-dione;
- 7-benzyl-1,3-diisobutyl-1,3,7-trihydropurine-2,6-dione;
- 20 1,3,7-tribenzyl-1,3,7-trihydropurine-2,6-dione;
- 7-benzyl-1,3-di(phenylethyl)-1,3,7-trihydropurine-2,6-dione;
- 7-benzyl-1,3-dicyclobutyl-1,3,7-trihydropurine-2,6-dione;
- 7-benzyl-1,3-di(pyrid-4-ylmethyl)-1,3,7-trihydropurine-2,6-dione;
- 7-benzyl-1,3-di(furan-3-ylmethyl)-1,3,7-trihydropurine-2,6-dione;
- 25 7-benzyl-1,3-di(4-methoxybenzyl)-1,3,7-trihydropurine-2,6-dione;
- 7-benzyl-1,3-di(4-trifluoromethylbenzyl)-1,3,7-trihydropurine-2,6-dione; and
- 7-benzyl-1,3-di(3-fluorobenzyl)-1,3,7-trihydropurine-2,6-dione.

EXAMPLE 2**Preparation of a Compound of Formula (3)****A. Preparation of a Compound of Formula (3) where R¹ and R² are both n-Propyl**

5 7-Benzyl-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione, a compound of formula (2), (2.0g, 6.1mmole) and N-chlorosuccinimide (1.0g, 7.4mmole) were combined in 100mL of tetrahydrofuran and stirred at room temperature for 4 hours. The solvent was removed under reduced pressure, and the residue dissolved in ethyl acetate. The solution was washed with water, then brine, and dried over magnesium sulfate. The solvent was removed under vacuum,
 10 to afford a compound of formula (3) where R¹ and R² are both n-propyl, 7-benzyl-8-chloro-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione, which was recrystallized from ethyl acetate/hexane (1:50).

B. Preparation of a Compound of Formula (3), varying R¹ and R²

15 Similarly, following the procedure of 2A above, but replacing 7-benzyl-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione by other compounds of formula (2), the following compounds of formula (3) are prepared:

- 7-benzyl-8-chloro-1,3-dimethyl-1,3,7-trihydropurine-2,6-dione;
- 7-benzyl-8-chloro-1,3-diethyl-1,3,7-trihydropurine-2,6-dione;
- 20 7-benzyl-8-chloro-1,3-di(methoxyethyl)-1,3,7-trihydropurine-2,6-dione;
- 7-benzyl-8-chloro-1,3-di-n-butyl-1,3,7-trihydropurine-2,6-dione;
- 7-benzyl-8-chloro-1,3-diisobutyl-1,3,7-trihydropurine-2,6-dione;
- 8-chloro-1,3,7-tribenzyl-1,3,7-trihydropurine-2,6-dione;
- 7-benzyl-8-chloro-1,3-di(phenylethyl)-1,3,7-trihydropurine-2,6-dione;
- 25 7-benzyl-8-chloro-1,3-dicyclobutyl-1,3,7-trihydropurine-2,6-dione;
- 7-benzyl-8-chloro-1,3-di(pyrid-4-ylmethyl)-1,3,7-trihydropurine-2,6-dione;
- 7-benzyl-8-chloro-1,3-di(furan-3-ylmethyl)-1,3,7-trihydropurine-2,6-dione;

7-benzyl-8-chloro-1,3-di(4-methoxybenzyl)-1,3,7-trihydropurine-2,6-dione;
 7-benzyl-8-chloro-1,3-di(4-trifluoromethylbenzyl)-1,3,7-trihydropurine-2,6-dione; and
 7-benzyl-8-chloro-1,3-di(3-fluorobenzyl)-1,3,7-trihydropurine-2,6-dione.

5 C. Preparation of a Compound of Formula (3), varying R¹ and R²

Similarly, following the procedure of 2A above, but replacing 7-benzyl-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione by other compounds of formula (2), any compound of formula (3) is prepared.

10

EXAMPLE 3

Preparation of a Compound of Formula (4)

A. Preparation of a Compound of Formula (4) where R¹ and R² are both n-Propyl, X is Phenyl, and L is -O-

15 7-Benzyl-8-chloro-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione, a compound of formula (3) where R¹ and R² are both n-propyl (5.0g, 14mmoles), and 4-hydroxyphenyl-boronic acid (2.0g, 14mmoles) were dissolved in 100 ml of a mixture of toluene/ethanol (4:1) and stirred at reflux for 16 hours. Solvent was removed under reduced pressure, and the residue was chromatographed over a silica gel column, eluting with ethyl acetate:hexane (1:4) to give a
 20 compound of formula (4) where R¹ and R² are both n-propyl, X is phenyl, and L is -O- (7-benzyl-8-(4-hydroxyphenyl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione), as a pale yellow solid.

B. Preparation of a Compound of Formula (4), varying R¹, R², X and L

25 Similarly, following the procedure of 3A above, replacing 7-benzyl-8-chloro-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione with other compounds of formula (3), the following compounds of formula (4) are prepared:

7-benzyl-8-(4-hydroxyphenyl)-1,3-dimethyl-1,3,7-trihydropurine-2,6-dione;
 7-benzyl-8-(4-hydroxyphenyl)-1,3-diethyl-1,3,7-trihydropurine-2,6-dione;
 7-benzyl-8-(4-hydroxyphenyl)-1,3-di(methoxyethyl)-1,3,7-trihydropurine-2,6-dione;

- 7-benzyl-8-(3-methoxy-4-hydroxyphenyl)-1,3-di-n-butyl-1,3,7-trihydropurine-2,6-dione;
 7-benzyl-8-(3-hydroxypyrid-2-yl)-1,3-diisobutyl-1,3,7-trihydropurine-2,6-dione;
 8-(2-fluoro-3-hydroxyphenyl)-1,3,7-tribenzyl-1,3,7-trihydropurine-2,6-dione;
 7-benzyl-8-(2-trifluoromethyl-4-hydroxyphenyl)-1,3-di(phenylethyl)-1,3,7-trihydropurine-2,6-
 5 dione;
 7-benzyl-8-(5-hydroxybenzothiazol-2-yl)-1,3-dicyclobutyl-1,3,7-trihydropurine-2,6-dione;
 7-benzyl-8-(4-hydroxyphenyl)-1,3-di(pyrid-4-ylmethyl)-1,3,7-trihydropurine-2,6-dione;
 7-benzyl-8-(4-hydroxyphenyl)-1,3-di(furan-3-ylmethyl)-1,3,7-trihydropurine-2,6-dione;
 7-benzyl-8-(4-hydroxyphenyl)-1,3-di(4-methoxybenzyl)-1,3,7-trihydropurine-2,6-dione;
 10 7-benzyl-8-(4-hydroxyphenyl)-1,3-di(4-trifluoromethylbenzyl)-1,3,7-trihydropurine-2,6-dione;
 and
 7-benzyl-8-(4-hydroxyphenyl)-1,3-di(3-fluorobenzyl)-1,3,7-trihydropurine-2,6-dione.

C. Preparation of a Compound of Formula (4), varying R¹, R², X and L

- 15 Similarly, following the procedure of 3A above, but replacing 7-benzyl-8-chloro-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione with other compounds of formula (3), any compound of formula (4) is prepared.

20

EXAMPLE 4

Preparation of a Compound of Formula (5)

- A. Preparation of a Compound of Formula (5) where R¹ and R² are both n-Propyl, X is Phenyl, and L is -O-

- 25 The compound of formula (4) where R¹ and R² are both n-propyl, X is phenyl, and L is -O- (7-benzyl-8-(4-hydroxyphenyl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione) (613mg) was dissolved in methanol (50ml), a catalytic amount of palladium hydroxide added, and the mixture stirred under hydrogen at room temperature overnight. The mixture was filtered, washing the

catalyst with methanol, and the solvent was evaporated from the filtrate under reduced pressure to provide 8-(4-hydroxyphenyl)-1,3-dipropyl-1,3,7-trihydropurine.

This product was dissolved in methanol, di-tert-butylidicarbonate (0.7g, 3.2mmol) and N,N-di-isopropylethylamine (1ml) added, and the mixture refluxed overnight. The solvent was removed under reduced pressure, and the residue chromatographed on a silica gel column, to give a compound of formula (5), 7-t-butoxycarbonyl-8-(4-hydroxyphenyl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione.

B. Preparation of a Compound of Formula (5), varying R¹, R², X and L

- Similarly, following the procedure of 4A above, replacing 7-benzyl-8-(4-hydroxyphenyl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione with other compounds of formula (4), the following compounds of formula (5) are prepared:
- 7-t-butoxycarbonyl-8-(4-hydroxyphenyl)-1,3-dimethyl-1,3,7-trihydropurine-2,6-dione;
 - 7-t-butoxycarbonyl-8-(4-hydroxyphenyl)-1,3-diethyl-1,3,7-trihydropurine-2,6-dione;
 - 7-t-butoxycarbonyl-8-(4-hydroxyphenyl)-1,3-di(methoxyethyl)-1,3,7-trihydropurine-2,6-dione;
 - 7-t-butoxycarbonyl-8-(3-methoxy-4-hydroxyphenyl)-1,3-di-n-butyl-1,3,7-trihydropurine-2,6-dione;
 - 7-t-butoxycarbonyl-8-(3-hydroxypyrid-2-yl)-1,3-diisobutyl-1,3,7-trihydropurine-2,6-dione;
 - 7-t-butoxycarbonyl-8-(2-fluoro-3-hydroxyphenyl)-1,3-dibenzyl-1,3,7-trihydropurine-2,6-dione;
 - 7-t-butoxycarbonyl-8-(2-trifluoromethyl-4-hydroxyphenyl)-1,3-di(phenylethyl)-1,3,7-trihydropurine-2,6-dione;
 - 7-t-butoxycarbonyl-8-(5-hydroxybenzothiazol-2-yl)-1,3-dicyclobutyl-1,3,7-trihydropurine-2,6-dione;
 - 7-t-butoxycarbonyl-8-(4-hydroxyphenyl)-1,3-di(pyrid-4-ylmethyl)-1,3,7-trihydropurine-2,6-dione;
 - 7-t-butoxycarbonyl-8-(4-hydroxyphenyl)-1,3-di(furan-3-ylmethyl)-1,3,7-trihydropurine-2,6-dione;
 - 7-t-butoxycarbonyl-8-(4-hydroxyphenyl)-1,3-di(4-methoxybenzyl)-1,3,7-trihydropurine-2,6-dione;
 - 7-t-butoxycarbonyl-8-(4-hydroxyphenyl)-1,3-di(4-trifluoromethylbenzyl)-1,3,7-trihydropurine-2,6-dione; and
 - 7-t-butoxycarbonyl-8-(4-hydroxyphenyl)-1,3-di(3-fluorobenzyl)-1,3,7-trihydropurine-2,6-dione.

C. Preparation of a Compound of Formula (5), varying R¹, R³, and X

Similarly, following the procedure of 4A above, but replacing 7-benzyl-8-(4-hydroxyphenyl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione with other compounds of formula (3), any compound of formula (5) is prepared.

5

EXAMPLE 5

Preparation of a Compound of Formula I

A. Preparation of a Compound of Formula I where R¹ and R² are n-Propyl, X is Phenyl, Y is
-O-CH₂-, and Z is 5-(4-methoxyphenyl)-[1,2,4]oxadiazol-3-yl

10

A mixture of 7-t-butoxycarbonyl-8-(4-hydroxyphenyl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione, a compound of formula (5) (50mg, 0.117mmol), 3-chloromethyl-5-(4-methoxyphenyl)-[1,2,4]oxadiazole (26mg, 0.117mmol), and sodium hydride (10mg, 0.234mmol) in N,N-dimethylformamide was stirred at room temperature for 24 hours. The solvent was removed under reduced pressure, and the residue purified by preparative thin layer chromatography, to afford 8-{4-[5-(4-methoxyphenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione.

20 B. Preparation of a Compound of Formula I where R¹ and R² are n-Propyl, varying X, Y, and Z

Similarly, following the procedure of 5A above, but optionally replacing 7-t-butoxycarbonyl-8-(4-hydroxyphenyl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione by other compounds of formula (5), and optionally replacing 3-chloromethyl-5-(4-methoxyphenyl)-[1,2,4]oxadiazole by other compounds of formula Cl-Y-Z, the following compounds of Formula I were prepared:

25 8-{4-[5-(2-methoxyphenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;

8-{4-[5-(3-methoxyphenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;

8-{4-[5-(4-fluorophenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;

5 8-{4-[5-(4-(trifluoromethyl)phenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione; and

8-{4-[5-(4-trifluoromethylphenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione.

10 C. Preparation of a Compound of Formula I, varying R¹, R², X, Y, and Z

Similarly, following the procedure of 5A above, but optionally replacing 7-t-butoxycarbonyl-8-(4-hydroxyphenyl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione by other compounds of formula (5), and optionally replacing 3-chloromethyl-5-(4-methoxyphenyl)-[1,2,4]oxadiazole by other compounds of formula YZ, the following compounds of Formula I

15 are prepared:

8-{4-[5-(4-methoxyphenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-dimethyl-1,3,7-trihydropurine-2,6-dione;

8-{4-[5-(4-methoxyphenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-diethyl-1,3,7-trihydropurine-2,6-dione;

20 8-{4-[5-(4-methoxyphenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-di(methoxyethyl)-1,3,7-trihydropurine-2,6-dione;

8-{4-[5-(4-methoxyphenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-di-n-butyl-1,3,7-trihydropurine-2,6-dione;

25 8-{4-[5-(4-methoxyphenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-diisobutyl-1,3,7-trihydropurine-2,6-dione;

8-{4-[5-(2-fluoro-3-hydroxyphenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-dibenzyl-1,3,7-trihydropurine-2,6-dione;

8-{4-[5-(2-trifluoromethyl-4-hydroxyphenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-di(phenylethyl)-1,3,7-trihydropurine-2,6-dione;

30 8-{4-[5-(4-trifluoromethyl-3-hydroxyphenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-dicyclobutyl-1,3,7-trihydropurine-2,6-dione;

8-{4-[5-(4-hydroxyphenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-di(pyrid-4-ylmethyl)-1,3,7-trihydropurine-2,6-dione;

35 8-{4-[5-(4-hydroxyphenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-di(furan-3-ylethyl)-1,3,7-trihydropurine-2,6-dione;

- 8-{4-[5-(4-methoxyphenyl)imidazol-2-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-{4-[5-(4-methoxyphenyl)oxazol-2-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 5 8-{4-[5-(4-methoxyphenyl)thiazol-2-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-{4-[5-(4-methoxyphenyl)-1,3,5-triazin-2-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-{4-[5-(4-methoxyphenyl)pyrimidin-2-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 10 8-{4-[5-(4-methoxyphenyl)-[1,2,4]oxadiazol-3-ylethoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-{4-[5-(4-methoxyphenyl)-[1,2,4]oxadiazol-3-ylpropoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 15 8-{4-[5-(4-fluorophenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-{4-[5-(4-trifluoromethylphenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-{4-[5-(3,4-dimethoxyphenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione; and
- 20 8-{5-[5-(4-methoxyphenyl)-[1,2,4]oxadiazol-3-ylethoxy]pyridin-2-yl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione.

D. Preparation of a Compound of Formula I, varying R¹, R², X, Y, and Z

- 25 Similarly, following the procedure of 5A above, but optionally replacing 7-t-butoxycarbonyl-8-(4-hydroxyphenyl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione by other compounds of formula (5), and optionally replacing 3-chloromethyl-5-(4-methoxyphenyl)-[1,2,4]oxadiazole by other compounds of formula YZ, any compound of Formula I can be prepared.

30

EXAMPLE 6

Preparation of a Compound of Formula (7)

- A. Preparation of a Compound of Formula (7) where R¹ and R² are n-Propyl and X is 1,4-Phenylene
- 35

- a) A solution of 7-benzyloxy-8-(4-benzyloxyphenyl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione (4.39g, 8.17mmol) (prepared in a manner analogous to the preparation of the compound of formula (5)) in methylene chloride-methanol (1:1) (100ml) was stirred under hydrogen with a catalytic amount of 10% Pd(OH)₂/C at room temperature overnight. The catalyst was filtered off, washed with dichloromethane/methanol, and the filtrate was evaporated under reduced pressure to give a solid, which was washed with methylene chloride to afford pure product, 8-(4-hydroxyphenyl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione.
- 10 b) A mixture of 8-(4-hydroxyphenyl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione (2.2g, 6.7mmol), tert-butyldimethylsilyl chloride (2.0g, 13.4mmol), and imidazole (0.91g, 13.4mmol) in tetrahydrofuran (50ml) was stirred overnight at room temperature, then refluxed for 10 hours. The solvent was removed under reduced pressure, and the residue was dissolved in dichloromethane and passed through a silica gel plug, which was then washed with ethyl acetate.
- 15 The filtrate was concentrated under reduced pressure to afford 8-[(4-tert-butyldimethylsilyloxy)phenyl]-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione.
- c) To a solution of 8-[(4-tert-butyldimethylsilyloxy)phenyl]-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione (13.7g, 31mmol) in tetrahydrofuran (200ml) was added sodium hydride (1.6g, 40mmol), and the mixture was stirred for 30 minutes at room temperature.
- 20 Benzyloxymethyl chloride (4.9g, 31mmol) was then added, and the mixture stirred for 1 hour at room temperature. The solvent was then removed under reduced pressure, and the residue dissolved in methylene chloride. This solution was washed with brine, and the solvent removed under reduced pressure. The residue was chromatographed on silica gel, eluting with ethyl acetate, to afford 7-benzyloxymethyl-8-[(4-tert-butyldimethylsilyloxy)-phenyl]-1,3-dipropyl-
- 25 1,3,7-trihydropurine-2,6-dione as a liquid.
- d) To a solution of 7-benzyloxymethyl-8-[(4-tert-butyldimethylsilyloxy)-phenyl]-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione (10.5g, 18.7mmol) in tetrahydrofuran (200ml) was added tetra(tert-butyl)ammonium fluoride (3g), and the mixture stirred for 2 hours at room temperature. The product was passed through a silica gel plug, which was washed with ethyl

acetate. The filtrate was evaporated under reduced pressure, and the residue washed with dichloromethane, to afford 7-benzyloxymethyl-8-(4-hydroxy-phenyl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione as a white solid.

- e) To a solution of 7-benzyloxymethyl-8-(4-hydroxyphenyl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione (1g, 2.2mmol) in tetrahydrofuran (20ml) was added potassium t-butoxide (0.28g, 2.4mmol), and the mixture stirred for 30 minutes at room temperature. Iodoacetonitrile (0.38g, 2.23mmol) was then added, and the mixture stirred for 16 hours at room temperature. The solvent was removed under reduced pressure, and the residue was dissolved in ethyl acetate and passed through a silica gel plug, to provide 7-benzyloxymethyl-8-(4-cyanomethoxyphenyl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione, a compound of formula (7)

B. Preparation of a Compound of Formula (7), varying R¹ and R²

- Similarly, following the procedure of 6A above, but replacing 7-benzyl-8-(4-benzyloxyphenyl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione with other similar compounds, other compounds of formula (7) are prepared.

EXAMPLE 7

Preparation of a Compound of Formula (8)

- A. Preparation of a Compound of Formula (8) where R¹ and R² are n-Propyl and X is 1,4-Phenylene

- A solution of 7-benzyloxymethyl-8-(4-cyanomethoxyphenyl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione (1.15g, 2.36mmol) in ethanol (50ml) was stirred with sodium ethoxide (0.25g, 3.54mmol) and hydroxylamine hydrochloride (0.15g, 3.54mmol) at room temperature overnight. The solvent was removed under reduced pressure, the residue dissolved in

dichloromethane/methanol (50:1), and the solution passed through a silica gel plug. The filtrate was evaporated under reduced pressure to afford

8-[4-(2-amino-2-(hydroxyimino)ethoxy)phenyl]-7-[(phenylmethoxy)methyl]-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione.

5

B. Preparation of a Compound of Formula (8), varying R¹ and R²

Similarly, following the procedure of 7A above, but replacing 7-benzyloxymethyl-8-(4-cyanomethoxyphenyl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione with other similar compounds, other compounds of formula (8) are prepared.

10

EXAMPLE 8

Preparation of a Compound of Formula I

A. Preparation of a Compound of Formula I where R¹ and R² are n-Propyl, R³ is Hydrogen,

15 X is 1,4-Phenylene, Y is -O(CH₂)-, and Z is 5-(2-chlorophenyl)-[1,2,4]oxadiazol-3-yl

To a solution of 7-benzyloxymethyl-8-[4-(amino(hydroxyimino)methoxy)-phenyl]-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione (50mg) in dioxane (3ml) was added potassium carbonate (0.5g), followed by 2-chlorobenzoyl chloride. The mixture was stirred at room temperature for 10 minutes, then the solids filtered off. The filtrate was evaporated under reduced pressure, and the residue dissolved in xylene. The solution was heated to 145°C overnight, then the solvent removed under reduced pressure, and the residue chromatographed on silica gel, eluting with ethyl acetate, to afford 8-{4-[5-(2-chlorophenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione.

25

B. Preparation of a Compound of Formula I where R¹ and R² are n-Propyl, varying X, Y, and Z

Similarly, following the procedure of 8A above, but optionally replacing 7-benzyloxymethyl-8-[4-(amino(hydroxyimino)methoxy)-phenyl]-1,3-dipropyl-1,3,7-

30

trihydropurine-2,6-dione by other compounds of formula (8), and optionally replacing by other compounds of formula $RC(O)Cl$, the following compounds of Formula I were prepared:

- 8-(4-{{[5-(3-methylphenyl)(1,2,4-oxadiazol-3-yl)]methoxy}phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 5 8-(4-{{[5-(2-fluorophenyl)(1,2,4-oxadiazol-3-yl)]methoxy}phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-(4-{{[5-(2-methylphenyl)(1,2,4-oxadiazol-3-yl)]methoxy}phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-(4-{{[5-(3-methoxyphenyl)(1,2,4-oxadiazol-3-yl)]methoxy}phenyl}-1,3-dipropyl-1,3,7-
- 10 trihydropurine-2,6-dione;
- methyl 4-(3-{{[4-(2,6-dioxo-1,3-dipropyl-1,3,7-trihydropurin-8-yl)phenoxy]methyl}-1,2,4-oxadiazol-5-yl)benzoate;
- 1,3-dipropyl-8-[4-({5-[2-(trifluoromethoxy)phenyl](1,2,4-oxadiazol-3-yl)}methoxy)phenyl]-1,3,7-trihydropurine-2,6-dione;
- 15 8-(4-{{[5-(2-bromophenyl)(1,2,4-oxadiazol-3-yl)]methoxy}phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione; and
- 8-(4-{{[5-(2,4-dimethoxyphenyl)(1,2,4-oxadiazol-3-yl)]methoxy}phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione.

20

EXAMPLE 9

25

Preparation of a Compound of Formula I

A. Preparation of a Compound of Formula I where R^1 and R^2 are n-Propyl, X is 1,4-Pyrazolene, R^3 is Hydrogen, Y is Propylene, and Z is Phenyl

a) Preparation of a Compound of Formula (22) in which Z is 1,4-Pyrazolene, Y is Propylene, and X is Phenyl

a) To a solution of ethyl 4-pyrazole carboxylate (3.57mmol) in acetone (30ml) was added potassium carbonate (35.7mmol) and 1-bromo-3-phenylpropane (3.57mmol). The suspension
5 was refluxed overnight, after which the solvent was removed under reduced pressure. The residue was partitioned between ethyl acetate and water, the organic layer dried over magnesium sulfate, filtered, and the filtrate evaporated under reduced pressure to give an oil, which was purified by preparative TLC, to give ethyl 1-(3-phenylpropyl)pyrazole-4-carboxylate.

b) The ester was then dissolved in methanol (30ml), and potassium hydroxide (1.5g) added.
10 The mixture was refluxed for 5 hours under nitrogen, then the solvent removed under reduced pressure. The residue was partitioned between methylene chloride and water. The aqueous layer was separated and acidified to pH 1-2 with 6N hydrochloric acid, then extracted with ethyl acetate. The combined organic layers were dried over magnesium sulfate, and the solvent removed under reduced pressure, to give 1-(3-phenylpropyl)pyrazole-4-carboxylic acid.

15 c To a solution of 1-(3-phenylpropyl)pyrazole-4-carboxylic acid (300mg, 1.30mmol) in N,N-dimethylformamide (7ml) was added 1-[3-(dimethylamino)propyl]-3-ethylcarbodiimide hydrochloride (300mg). The suspension was stirred at room temperature until all solid was dissolved, then 5,6-diamino-1,3-dipropyl-1,3-dihydropyrimidine-2,4-dione (450 mg) added, and the reaction mixture stirred at room temperature overnight. 2N sodium hydroxide (10ml) was
20 then added, and the suspension heated at 120°C for 2 hours. The reaction mixture was cooled in ice water and acidified to pH 2-3. The mixture was partitioned between water and ethyl acetate, and the ethyl acetate layer and any solid material was washed with water, and the solvent removed under reduced pressure. The residue was triturated with ether, giving pure product, 8-[1-(3-phenylpropyl)pyrazol-4-yl]-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione.

25

B. Preparation of a Compound of Formula I where R¹ and R² are n-Propyl, varying X, Y, and Z

Similarly, following the procedure of 9A above, but replacing 1-bromo-3-phenylpropane with benzyl bromide, the following compound of Formula I was prepared:

30 8-(1-benzylpyrazol-4-yl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione.

Similarly, 8-{1-[(3,5-dimethylisoxazol-4-yl)methyl]pyrazol-4-yl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione and 8-[1-(3-cyclohexylpropyl)pyrazol-4-yl]-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione were prepared.

35

5

10

EXAMPLE 10

15

Preparation of a Compound of Formula I

A. **Preparation of a Compound of Formula I where R¹ and R² are n-Propyl, X is 1,4-Pyrazolene, R³ is 2-Hydroxyethyl, Y is Methylene, and Z is Phenyl**

20

To a solution of 8-(1-benzylpyrazol-4-yl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione (0.51mmol) in N,N-dimethylformamide (2ml) was added potassium carbonate (5.1mmol) and 2-bromoethanol (5.1mmol). The suspension was heated at 70°C overnight, the solvent removed under reduced pressure, and the residue purified by preparative TLC, yielding pure 7-(2-hydroxyethyl)-8-(1-benzylpyrazol-4-yl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione.

25

B. **Preparation of a Compound of Formula I where R¹ and R² are n-Propyl, varying X, Y, and Z**

Similarly, following the procedure of 10A above, but replacing 2-bromoethanol with other compounds of formula R³LG, the following compounds of Formula I were prepared:

- 7-allyl-8-(1-benzylpyrazol-4-yl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
 7-(methylethyl)-8-{4-[5-(2-methoxyphenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-
 5 dipropyl-1,3,7-trihydropurine-2,6-dione;
 7-(2-methoxyethyl)-8-{4-[5-(2-methoxyphenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-
 dipropyl-1,3,7-trihydropurine-2,6-dione;
 7-methyl-8-{4-[5-(2-methoxyphenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-
 trihydropurine-2,6-dione; and
 10 7-(prop-2-enyl)-8-{4-[5-(2-methoxyphenyl)-[1,2,4]oxadiazol-3-ylmethoxy]phenyl}-1,3-
 dipropyl-1,3,7-trihydropurine-2,6-dione.

EXAMPLE 11

15

Preparation of a Compound of Formula (22)

A. Preparation of a Compound of Formula HO-C(O)-XYZ in which X is Phenyl, Y is -O-CH₂-, and Z is 5-(2-Methoxyphenyl)-[1,2,4]oxadiazol-3-yl

- 20 a) A solution of methyl 4-hydroxybenzoate (3.04g, 20mmol) and 3-chloromethyl-5-(2-methoxyphenyl)-[1,2,4]oxadiazole (4.48g, 20mmol) in acetone (200ml) was refluxed overnight. The mixture was filtered, solvent removed from the filtrate, and the residue was dissolved in ethyl acetate. Methanol was added to this solution to precipitate the product, methyl 4-{2-[5-(2-methoxyphenyl)-1,2,4-oxadiazol-3-yl]methoxy} benzoate.
- 25 b) A solution of methyl 4-{2-[5-(2-methoxyphenyl)-1,2,4-oxadiazol-3-yl]methoxy} benzoate (5.0g) and potassium hydroxide (10g) in methanol(200ml) was refluxed for 4.5 hours. The solvent was removed under reduced pressure, and the residue partitioned between methylene chloride and water. The aqueous layer was acidified with 6N hydrochloric acid to pH 3, and the precipitate extracted into ethyl acetate. The solvent was removed under reduced pressure to give
- 30 4-{2-[5-(2-methoxyphenyl)-1,2,4-oxadiazol-3-yl]methoxy} benzoic acid.

B. Preparation of a Compound of Formula HO-C(O)-XYZ, varying X, Y and Z

Similarly, following the procedure of 11A above, but replacing 3-chloromethyl-5-(2-methoxyphenyl)-[1,2,4]oxadiazole with other 3-chloromethyl-5-substituted-[1,2,4]oxadiazoles the following compounds of formula HO-C(O)-XYZ I were prepared:

- 4-{2-[5-(3-fluorophenyl)-1,2,4-oxadiazol-3-yl]methoxy} benzoic acid;
 5 4-{2-[5-cyclopentyl)-1,2,4-oxadiazol-3-yl]methoxy} benzoic acid; and
 4-{2-[5-cyclohexyl)-1,2,4-oxadiazol-3-yl]methoxy} benzoic acid.

EXAMPLE 12

10

Preparation of a Compound of Formula I

A. Preparation of a Compound of Formula I where R¹ and R² are n-Propyl, R³ is Hydrogen, X is 1,4-Phenylene, Y is -O(CH₂)-, and Z is 5-(2-Methoxyphenyl)-[1,2,4]oxadiazol-3-yl

15

A mixture of 4-{2-[5-(2-methoxyphenyl)-1,2,4-oxadiazol-3-yl]methoxy}benzoic acid (3.0g), 5,6-diamino-1,3-dipropyl-1,3-dihydropyrimidine-2,4-dione (3.2g) and 1-[3-(dimethylamino)propyl]-3-ethylcarbodiimide hydrochloride (3.0g) in N,N-dimethyl-formamide (50ml) was stirred overnight at room temperature. The solvent was removed under reduced pressure, and the residue dried under vacuum for 1 hour. To this was added 150 ml of 2N sodium hydroxide, and the mixture was heated at 120°C for 2 hours. The mixture was cooled to 0°C, and acidified with 6N hydrochloric acid to pH 2-3. The mixture was partitioned between water and ethyl acetate, and the ethyl acetate layer separated along with some solid product. This mixture was washed with water, solvent removed from the organic layer to a volume of about 20 ml. The solid thus obtained was filtered off, washed with ethyl acetate, and once with ethyl acetate/methanol (1:1). The solid was dried under vacuum to provide 8-{4-[5-(2-methoxyphenyl)-[1,2,4]-oxadiazol-3-yl]methoxy}phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione, a compound of Formula I.

25

B. Preparation of a Compound of Formula I where R¹ and R² are n-Propyl, varying X, Y, and Z

- Similarly, following the procedure of 12A above, but optionally replacing 4-{2-[5-(2-methoxyphenyl)-1,2,4-oxadiazol-3-yl]methoxy} benzoic acid with other compounds of formula (22), and optionally replacing 5,6-diamino-1,3-dipropyl-1,3-dihydropyrimidine-2,4-dione with other compounds of formula (the following compounds of Formula I were prepared:
- 8-{4-[(3,5-dimethylisoxazol-4-yl)methoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-{4-[2-phenoxyethoxy]phenyl-[1,2,4]-oxadiazol-3-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-{4-[5-(4-fluorophenyl)-[1,2,4]-oxadiazol-3-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-{4-[5-(3-cyclohexyl)-[1,2,4]-oxadiazol-3-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-{4-[5-(3-cyclopentyl)-[1,2,4]-oxadiazol-3-ylmethoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-{4-[3-(3-chlorophenyl)-[1,2,4]-oxadiazol-5-ylmethoxy]-phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-{4-[3-(4-biphenyl)-[1,2,4]-oxadiazol-5-ylmethoxy]-phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-{4-[3-(4-isopropylphenyl)-[1,2,4]-oxadiazol-5-ylmethoxy]-phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-{4-[3-(4-tert-butylphenyl)-[1,2,4]-oxadiazol-5-ylmethoxy]-phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-{4-[5-(4-iodopyrazol-1-yl)ethoxy]-phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-{4-[5-(4-chlorophenyl)-[1,2,4]-oxadiazol-3-ylmethoxy]-phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-{4-[3-(4-methylphenyl)-[1,2,4]-oxadiazol-5-ylmethoxy]-phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione; and
- 8-{4-[3,5-dimethyl-[1,2,4]-oxadiazol-5-ylmethoxy]-phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione.

EXAMPLE 13

Preparation of a Compound of Formula I

A. Preparation of a Compound of Formula I where R¹ and R² are n-Propyl, R³ is Hydrogen, X is 1,4-Phenylene, Y is -O(CH₂)-, and Z is 5-(2-Methoxyphenyl)-[1,2,4]oxadiazol-3-yl

- 5 a) To a solution of 8-[4-(phenylmethoxy)phenyl]-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione (3.8g, 9.08mmoles) in anhydrous dimethylformamide (100mL) was added potassium carbonate (6.27g, 45.4 mmoles), followed by 2-(trimethylsilyl)ethoxymethyl chloride (3.21mL, 18mmoles), and the mixture stirred at 70°C for 72 hours. The solvent was removed under reduced pressure, and the residue purified by flash column chromatography, eluting with 30% EtOAc/Hexanes, to give 3.7g of 7-[(2-trimethylsilyl)ethoxymethyl]-8-[4-(phenylmethoxy)phenyl]-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione.
- 10

15

b)

- 20 7-[(2-trimethylsilyl)ethoxymethyl]-8-[4-(phenylmethoxy)phenyl]-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione (1.74g, 3.17mmoles) was dissolved in methanol (100mL), and to it was added Pearlmann's catalyst (1.0g). The resulting suspension was stirred at room temperature under a positive hydrogen pressure for 16 hours. The suspension was filtered through celite,

washed several times with 50:50 methylene chloride: methanol, and the filtrate was evaporated to give 7-[(2-trimethylsilyl)ethoxymethyl]-8-[4-hydroxyphenyl]-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione (1.2g) as a white solid.

5 c)

7-[(2-trimethylsilyl)ethoxymethyl]-8-[4-hydroxyphenyl]-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione (50mg, 0.1mmoles) was dissolved in acetone (2.5mL), to which was added potassium carbonate (0.5g), followed by 5-chloromethyl 3-[(4-chloro)phenyl] oxadiazole (25mg, 0.1mmoles), and the mixture was stirred at 60 deg C for 16 hours. The solvent was removed under reduced pressure, and evaporated and the residue was subjected to preparative thin layer chromatography, eluting with 30% EtOAc/Hexanes, to provide 7-(2-trimethylsilyl)ethoxymethyl-8-(4-[[3-(4-chlorophenyl)(1,2,4-oxadiazol-5-yl)]methoxy}phenyl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione (50mg).

d)

7-(2-trimethylsilyl)ethoxymethyl-8-(4-[[3-(4-chlorophenyl)(1,2,4-oxadiazol-5-yl)]methoxy}phenyl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione was dissolved in ethanol (2mL), to which was added 1M HCL (0.5mL). The mixture was refluxed for 2 hours. The resulting white residue was collected by evaporating the solvent under reduced pressure and washing the residue with ethanol (3 X 2mL), to give pure 8-(4-[[3-(4-chlorophenyl)(1,2,4-oxadiazol-5-yl)]methoxy}phenyl)-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione.

B. Preparation of a Compound of Formula I where R¹ and R² are n-Propyl, varying X, Y, and Z

- Similarly, following the procedure of 13A above, but replacing 5-chloromethyl 3-[(4-chloro)phenyl] oxadiazole with similar compounds, the following compounds of Formula I were prepared:
- 5 8-(4-{{[5-(4-chlorophenyl)(1,2,4-oxadiazol-3-yl)]methoxy}phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-(4-{{[3-(4-methylphenyl)(1,2,4-oxadiazol-5-yl)]methoxy}phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 10 8-{4-[2-(4-iodopyrazolyl)ethoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-{4-[2-(4-methylpyrazolyl)ethoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-{4-[(5-methylisoxazol-3-yl)methoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-(1-{{[5-(2-methoxyphenyl)(1,2,4-oxadiazol-3-yl)]methyl}pyrazol-4-yl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 15 N-(2,6-dimethylphenyl)-2-[4-(2,6-dioxo-1,3-dipropyl(1,3,7-trihydropurin-8-yl))pyrazolyl]acetamide;
- 8-(1-{{[3-(4-methylphenyl)(1,2,4-oxadiazol-5-yl)]methyl}pyrazol-4-yl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 20 8-{1-[2-(1,3-dioxoisindolin-2-yl)ethyl]pyrazol-4-yl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 2-[4-(2,6-dioxo-1,3-dipropyl(1,3,7-trihydropurin-8-yl))pyrazolyl]-N-(2-chlorophenyl)acetamide;
- 2-[4-(2,6-dioxo-1,3-dipropyl(1,3,7-trihydropurin-8-yl))pyrazolyl]-N-phenylacetamide;
- 1,3-dipropyl-8-pyrazol-4-yl-1,3,7-trihydropurine-2,6-dione;
- 25 methyl 4-(3-{{[4-(2,6-dioxo-1,3-dipropyl-1,3,7-trihydropurin-8-yl)]phenoxy]methyl}-1,2,4-oxadiazol-5-yl)benzoate;
- 1,3-dipropyl-8-[4-({[5-[2-(trifluoromethoxy)phenyl](1,2,4-oxadiazol-3-yl)]methoxy}phenyl)-1,3,7-trihydropurine-2,6-dione;
- 8-(4-{{[5-(2-bromophenyl)(1,2,4-oxadiazol-3-yl)]methoxy}phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 30 8-(4-{{[5-(2,4-dimethoxyphenyl)(1,2,4-oxadiazol-3-yl)]methoxy}phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-{4-[(5-methylisoxazol-3-yl)methoxy]phenyl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 8-{1-[(2-methylphenyl)methyl]pyrazol-4-yl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
- 35 8-{1-[(3-methylphenyl)methyl]pyrazol-4-yl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;

- 1,3-dipropyl-8-(1-{[2-(trifluoromethyl)phenyl]methyl}pyrazol-4-yl)-1,3,7-trihydropurine-2,6-dione;
 8-{1-[(4-methylphenyl)methyl]pyrazol-4-yl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione
 8-{1-[(2-methoxyphenyl)methyl]pyrazol-4-yl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
 5 8-{1-[(2-fluorophenyl)methyl]pyrazol-4-yl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
 8-{1-[(3-methoxyphenyl)methyl]pyrazol-4-yl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
 8-{1-[(3-fluorophenyl)methyl]pyrazol-4-yl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
 8-{1-[(3-chlorophenyl)methyl]pyrazol-4-yl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
 1,3-dipropyl-8-(1-{[3-(trifluoromethyl)phenyl]methyl}pyrazol-4-yl)-1,3,7-trihydropurine-2,6-
 10 dione;
 8-{1-[(2-chlorophenyl)methyl]pyrazol-4-yl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
 1,3-dipropyl-8-(1-{[4-(trifluoromethyl)phenyl]methyl}pyrazol-4-yl)-1,3,7-trihydropurine-2,6-
 dione;
 8-{1-[(4-chlorophenyl)methyl]pyrazol-4-yl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione;
 15 8-{1-[(4-fluorophenyl)methyl]pyrazol-4-yl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione; and
 8-{1-[(4-fluorophenyl)methyl]pyrazol-4-yl}-1,3-dipropyl-1,3,7-trihydropurine-2,6-dione.

EXAMPLE 14

20

Preparation of a Compound of Formula (23)

A. Preparation of a Compound of Formula (23) in which R¹ is n-Butyl

25 A mixture of 6-aminouracil (5g, 10mmol), hexamethyldisilazane (40ml), and ammonium sulfate (260mg, 1.97mmol) was refluxed for 4 hours. Excess HMDS was removed under reduced pressure to provide the trimethylsilylated derivative of 6-aminouracil.

The product was combined with 1-iodobutane (10ml) and heated in an oil bath at 130°C for 3 days. The reaction mixture was then cooled to 0°C, and saturated aqueous sodium bicarbonate added. The resulting precipitate was filtered off, washed with water, to provide 6-amino-3-butyl-1,3-dihydropyrimidine-2,4-dione, a compound of formula (23), which was used in
 30 the next reaction with no further purification.

B. Preparation of other Compounds of Formula (23)

Similarly, following the procedure of 14A above, but replacing 1-iodobutane with other halides of formula $R^1\text{Hal}$, the following compounds of formula (23) were prepared:

- 5 6-amino-3-ethyl-1,3-dihydropyrimidine-2,4-dione;
6-amino-3-n-propyl-1,3-dihydropyrimidine-2,4-dione;
6-amino-3-cyclopropylmethyl-1,3-dihydropyrimidine-2,4-dione;
6-amino-3-(2-methylpropyl)-1,3-dihydropyrimidine-2,4-dione;
6-amino-3-benzyl-1,3-dihydropyrimidine-2,4-dione; and
10 6-amino-3-ethynyl-1,3-dihydropyrimidine-2,4-dione.

C. Preparation of other Compounds of Formula (23)

Similarly, following the procedure of 14A above, but replacing 1-iodobutane with other halides of formula $R^1\text{Hal}$, the following compounds of formula (23) are prepared.

- 15 6-amino-3-methyl-1,3-dihydropyrimidine-2,4-dione;
6-amino-3-isopropyl-1,3-dihydropyrimidine-2,4-dione;
6-amino-3-n-pentyl-1,3-dihydropyrimidine-2,4-dione;
6-amino-3-propylpentyl-1,3-dihydropyrimidine-2,4-dione;
6-amino-3-(2-phenylethyl)-1,3-dihydropyrimidine-2,4-dione;
20 6-amino-3-(2-methoxyethyl)-1,3-dihydropyrimidine-2,4-dione;
6-amino-3-(3-hydroxypropyl)-1,3-dihydropyrimidine-2,4-dione;
6-amino-3-(4-fluorobutyl)-1,3-dihydropyrimidine-2,4-dione;
6-amino-3-(2-ethylcarboxyethyl)-1,3-dihydropyrimidine-2,4-dione;
6-amino-3-ethenyl-1,3-dihydropyrimidine-2,4-dione;
25 6-amino-3-cyclopentyl-1,3-dihydropyrimidine-2,4-dione;
6-amino-3-(3-hydroxycyclopentyl)-1,3-dihydropyrimidine-2,4-dione;
6-amino-3-cyclohexyl-1,3-dihydropyrimidine-2,4-dione;
6-amino-3-cyclopropylmethyl-1,3-dihydropyrimidine-2,4-dione;
6-amino-3-phenyl-1,3-dihydropyrimidine-2,4-dione;
30 6-amino-3-(pyrid-3-yl)-1,3-dihydropyrimidine-2,4-dione;
6-amino-3-(pyrid-3-ylmethyl)-1,3-dihydropyrimidine-2,4-dione;
6-amino-3-(tetrahydrofuran-3-yl)-1,3-dihydropyrimidine-2,4-dione; and
6-amino-3-(piperidin-4-yl)-1,3-dihydropyrimidine-2,4-dione.

35 D. Preparation of other Compounds of Formula (23)

Similarly, following the procedure of 14A above, but replacing 1-iodobutane with other halides of formula $R^1\text{Hal}$, other compounds of formula (23) are prepared.

5

EXAMPLE 15

Preparation of a Compound of Formula (24)

A. Preparation of a Compound of Formula (24) in which R^1 is n-Butyl

A mixture of 6-amino-3-butyl-1,3-dihydropyrimidine-2,4-dione (4.0g, 21.8mmol) and aqueous acetic acid (120ml) was heated at 70°C until complete solution as attained, and the solution was cooled to 30°C. Sodium nitrite (3g) was added in small portions while stirring, forming an orange precipitate. The reaction mixture was cooled to 0°C, and the precipitate filtered off, washed with water, and dried under reduced pressure, to provide 5-nitroso-6-amino-3-butyl-1,3-dihydropyrimidine-2,4-dione, which was used in the next reaction with no further purification.

B. Preparation of other Compounds of Formula (24)

Similarly, following the procedure of 15A above, but replacing 6-amino-3-butyl-1,3-dihydropyrimidine-2,4-dione with other compounds of formula (23), the following compounds of formula (24) were prepared:

- 5-nitroso-6-amino-3-ethyl-1,3-dihydropyrimidine-2,4-dione;
- 5-nitroso-6-amino-3-n-propyl-1,3-dihydropyrimidine-2,4-dione;
- 5-nitroso-6-amino-3-cyclopropylmethyl-1,3-dihydropyrimidine-2,4-dione;
- 5-nitroso-6-amino-3-(2-methylpropyl)-1,3-dihydropyrimidine-2,4-dione;
- 5-nitroso-6-amino-3-benzyl-1,3-dihydropyrimidine-2,4-dione; and
- 5-nitroso-6-amino-3-ethynyl-1,3-dihydropyrimidine-2,4-dione.

C. Preparation of other Compounds of Formula (24)

Similarly, following the procedure of 15A above, but replacing 6-amino-3-butyl-1,3-dihydropyrimidine-2,4-dione with other halides of formula (23), the following compounds of formula (24) are prepared.

- 5-nitroso-6-amino-3-methyl-1,3-dihydropyrimidine-2,4-dione;

- 5-nitroso-6-amino-3-isopropyl-1,3-dihydropyrimidine-2,4-dione;
 5-nitroso-6-amino-3-n-pentyl-1,3-dihydropyrimidine-2,4-dione;
 5-nitroso-6-amino-3-propylpentyl-1,3-dihydropyrimidine-2,4-dione;
 5-nitroso-6-amino-3-(2-phenylethyl)-1,3-dihydropyrimidine-2,4-dione;
 5 5-nitroso-6-amino-3-(2-methoxyethyl)-1,3-dihydropyrimidine-2,4-dione;
 5-nitroso-6-amino-3-(3-hydroxypropyl)-1,3-dihydropyrimidine-2,4-dione;
 5-nitroso-6-amino-3-(4-fluorobutyl)-1,3-dihydropyrimidine-2,4-dione;
 5-nitroso-6-amino-3-(2-ethylcarboxyethyl)-1,3-dihydropyrimidine-2,4-dione;
 5-nitroso-6-amino-3-ethenyl-1,3-dihydropyrimidine-2,4-dione;
 10 5-nitroso-6-amino-3-cyclopentyl-1,3-dihydropyrimidine-2,4-dione;
 5-nitroso-6-amino-3-(3-hydroxycyclopentyl)-1,3-dihydropyrimidine-2,4-dione;
 5-nitroso-6-amino-3-cyclohexyl-1,3-dihydropyrimidine-2,4-dione;
 5-nitroso-6-amino-3-cyclopropylmethyl-1,3-dihydropyrimidine-2,4-dione;
 5-nitroso-6-amino-3-phenyl-1,3-dihydropyrimidine-2,4-dione;
 15 5-nitroso-6-amino-3-(pyrid-3-yl)-1,3-dihydropyrimidine-2,4-dione;
 5-nitroso-6-amino-3-(pyrid-3-ylmethyl)-1,3-dihydropyrimidine-2,4-dione;
 5-nitroso-6-amino-3-(tetrahydrofuran-3-yl)-1,3-dihydropyrimidine-2,4-dione; and
 5-nitroso-6-amino-3-(piperidin-4-yl)-1,3-dihydropyrimidine-2,4-dione.

20 D. Preparation of other Compounds of Formula (24)

Similarly, following the procedure of 15A above, but replacing 6-amino-3-butyl-1,3-dihydropyrimidine-2,4-dione with other halides of formula (23), other compounds of formula (24) are prepared.

25

EXAMPLE 16

Preparation of a Compound of Formula (25)

A. Preparation of a Compound of Formula (25) in which R¹ is n-Butyl

- 30 A mixture of 5-nitroso-6-amino-3-butyl-1,3-dihydropyrimidine-2,4-dione (2.1g, 10mmol) and aqueous ammonia (50ml) was heated at 70°C until complete solution as attained. Sodium hydrosulfite (7g) was then added in small portions until the solution became clear and colorless.

The reaction mixture was evaporated under reduced pressure until crystals appeared, and was then cooled to 0°C. The precipitate filtered off, washed with cold water, 5,6-diamino-3-butyl-1,3-dihydropyrimidine-2,4-dione, a compound of formula (25), which was used in the next reaction with no further purification.

5

B. Preparation of other Compounds of Formula (25)

Similarly, following the procedure of 16A above, but replacing 5-nitroso-6-amino-3-butyl-1,3-dihydropyrimidine-2,4-dione with other compounds of formula (24), the following compounds of formula (25) were prepared:

- 10 5,6-diamino-3-ethyl-1,3-dihydropyrimidine-2,4-dione;
5,6-diamino-3-n-propyl-1,3-dihydropyrimidine-2,4-dione;
5,6-diamino-3-cyclopropylmethyl-1,3-dihydropyrimidine-2,4-dione;
5,6-diamino-3-(2-methylpropyl)-1,3-dihydropyrimidine-2,4-dione;
5,6-diamino-3-benzyl-1,3-dihydropyrimidine-2,4-dione; and
15 5,6-diamino-3-ethynyl-1,3-dihydropyrimidine-2,4-dione.

C. Preparation of other Compounds of Formula (25)

Similarly, following the procedure of 16A above, but replacing 5-nitroso-6-amino-3-butyl-1,3-dihydropyrimidine-2,4-dione with other compounds of formula (24), the following compounds of formula (24) are prepared.

- 20 5,6-diamino-3-methyl-1,3-dihydropyrimidine-2,4-dione;
5,6-diamino-3-isopropyl-1,3-dihydropyrimidine-2,4-dione;
5,6-diamino-3-n-pentyl-1,3-dihydropyrimidine-2,4-dione;
5,6-diamino-3-propylpentyl-1,3-dihydropyrimidine-2,4-dione;
5,6-diamino-3-(2-phenylethyl)-1,3-dihydropyrimidine-2,4-dione;
25 5,6-diamino-3-(2-methoxyethyl)-1,3-dihydropyrimidine-2,4-dione;
5,6-diamino-3-(3-hydroxypropyl)-1,3-dihydropyrimidine-2,4-dione;
5,6-diamino-3-(4-fluorobutyl)-1,3-dihydropyrimidine-2,4-dione;
5,6-diamino-3-(2-ethylcarboxyethyl)-1,3-dihydropyrimidine-2,4-dione;
5,6-diamino-3-ethenyl-1,3-dihydropyrimidine-2,4-dione;
30 5,6-diamino-3-cyclopentyl-1,3-dihydropyrimidine-2,4-dione;
5,6-diamino-3-(3-hydroxycyclopentyl)-1,3-dihydropyrimidine-2,4-dione;
5,6-diamino-3-cyclohexyl-1,3-dihydropyrimidine-2,4-dione;
5,6-diamino-3-cyclopropylmethyl-1,3-dihydropyrimidine-2,4-dione;
5,6-diamino-3-phenyl-1,3-dihydropyrimidine-2,4-dione;
35 5,6-diamino-3-(pyrid-3-yl)-1,3-dihydropyrimidine-2,4-dione;

5,6-diamino-3-(pyrid-3-ylmethyl)-1,3-dihydropyrimidine-2,4-dione;
 5,6-diamino-3-(tetrahydrofuran-3-yl)-1,3-dihydropyrimidine-2,4-dione; and
 5-nitroso-6-amino-3-(piperidin-4-yl)-1,3-dihydropyrimidine-2,4-dione.

5 D. Preparation of other Compounds of Formula (25)

Similarly, following the procedure of 16A above, but replacing 5-nitroso-6-amino-3-butyl-1,3-dihydropyrimidine-2,4-dione with other compounds of formula (24), other compounds of formula (24) are prepared.

10

EXAMPLE 17

Preparation of a Compound of Formula I

A. Preparation of a Compound of Formula I where R¹ is n-Butyl, R² is Hydrogen, R³ is Hydrogen, X is 1,4-Pyrazolene, Y is a Methylene, and Z is Phenyl

15

Formula I

To a mixture of 5,6-diamino-3-butyl-1,3-dihydropyrimidine-2,4-dione (1.2g, 6mmol) and
 20 1-benzylpyrazole-4-carboxylic acid (1.2g, 6mmol) in methanol (30ml) was added 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride (1.16g, 6mmol). A bright yellow solid precipitated. The mixture was stirred overnight at room temperature, and the solid filtered off, washed with methanol, and dried under reduced pressure. The product was combined with hexamethyldisilazane (50ml) and ammonium sulfate (18mg) and heated at 130°C for 48 hours.
 25 The solvent was then removed under reduced pressure, and the residue triturated with methanol water (1:1), to provide 1-butyl-8-[1-benzylpyrazol-4-yl]-1,3,7-trihydropurine-2,6-dione, a compound of Formula I.

B. Preparation of other Compounds of Formula I

30 Similarly, following the procedure of 17A above, but replacing 5,6-diamino-3-butyl-1,3-dihydropyrimidine-2,4-dione with other compounds of formula (25), the following compounds of Formula I were prepared:
